# ಮೈಸೂರು ವಿಶ್ವವಿದ್ಯಾನಿಲಯ

# University of Mysore (Estd.1916)

# **M.Sc. ENVIRONMENTAL SCIENCE**

UNIVERSITY OF MYSORE Department of Studies in Environmental Science Manasagangotri, Mysuru-570006

# Regulations and Syllabus Master of Science in Environmental Science (M.Sc.) (Two-year semester scheme)

# Under Choice Based Credit System (CBCS)

# UNIVERSITY OF MYSORE

# GUIDELINES AND REGULATIONS LEADING TO MASTER OF SCIENCE IN ENVIRONMENTAL SCIENCE (TWO-YEAR SEMESTER SCHEME UNDER CBCS)

# **PROGRAMME DETAILS**

| Name of the Department    | : | Department of Studies in Environmental Science     |
|---------------------------|---|--|
| Subject                   | : | Environmental Science                              |
| Faculty                   |   | Science and Technology                             |
| Name of the Programme     | : | Master of Science in Environmental Science (M.Sc.) |
| Duration of the Programme |   | 2 years divided into 4 semesters                   |

# **Programme Outcomes**

3

- 1. Acquired fundamental knowledge of different aspects of environment and local, regional and global environmental problems.
- Developed environmental monitoring skills, including conduct of experiments and data analysis.
- 3. Obtained exposure to the environmental pollution control technologies.
- 4. Acquired the knowledge and skills needed for the environmental design and management.
- 5. Acquired skills in the preparation, planning and implementation of environmental projects.
- 6. The students passing M.Sc. Degree in Environmental Science and other relevant subjects have the opportunity of job and services in the field of Teaching, Researches, Projects, Effluent Treatment Plants of various Industries/Companies/Factories, Municipal Councils/Corporations, Central Pollution €ontrol Board, State Pollution Control Boards, National Research Institutes/Organizations/Laboratories, NEERI, EIA, GIS, Environmental Monitoring Projects, Environmental Consultants, Different Laboratories,

NGO's. Forest department, Water Purification and Treatment Plants and Various Sectors related to the field of Environment.

# Programme Specific Outcome (PSO)

- 1. Understand the basic concepts of Environments and its components along with their interactions through study of Ecology, Biodiversity, Environmental Chemistry, and Environmental Microbiology
- Understand the different kinds of Pollutions and their sources through study of Climate and Air Pollution Studies, Hazardous Waste & Environmental Toxicology and Soil Pollution and different laws about pollution

Jasey

- 3. Analyse and determine pollution using Environmental Analytical Techniques, Biostatistics and Computational Techniques.
- 4. Understand different technologies like biotechnology, water and wastewater treatment technology to find the solutions and their applications in abatement of Pollution and other environmental problems.
- 5. Use of different tools for the management of environment, energy resources, solid wastes, biodiversity conservation like Remote Sensing & Geographical Information Systems and different methodologies.
- 6. Understand the disaster management and industrial safety.
- 7. Determine the environmental impact due to different developmental projects and find solution to eliminate these impacts.
- 8. Through dissertation, student can identify a particular environmental problem, review the literature for finding the gaps, develop research methodology, collect data and carry out data analysis and interpretation for finding a suitable solution and acquire the ability to write the research findings in the form of structured thesis and communicate the research results through oral or poster presentations

Chapey

#### FIRST SEMESTER

#### HARD CORE

#### COURSE-I : ENVIRONMENTAL CHEMISTRY :

# Learning Objectives:

- \* Determine Physico-chemical parameters of different water and soil samples.
- \* A comprehensive understanding of the principles of atmospheric chemistry.

# **Course Outcome:**

- \* Get a basic idea about chemical pollution and fundamentals of chemical reaction.
- \* Build scientific temper and to learn the necessary skills to succeed in research or industrial field.

#### **Pedagogy** :

\* The subject is taught with practicals related to theoretical aspects. Methods and sample collection and analysis of air and water samples will be trained for students.

#### **COURSE CONTENT:**

#### UNIT-I:

**Fundamentals of Environmental Chemistry:** Stoichiometry. Gibbs' energy, Chemical potential, chemical equilibria, acid-base reactions, solubility product, solubility of gases in water, the carbonate system, unsaturated and saturated hydrocarbons, radionuclides.

#### UNIT-II:

**Atmospheric chemistry:** Chemical composition of Air: Classification of elements, chemical speciation. Particles, ions and radicals in the atmosphere. Chemical processes for formation of inorganic and organic particulate matters. Thermo chemical and photochemical reactions in the atmosphere. CFC's, Oxygen and Ozone chemistry, chemistry of air pollutants, photochemical smog.

#### UNIT-III:

**Chemical pollution and fundamentals of chemical reactions:** Oxidation, reduction, precipitation. Toxic chemicals in the environment, biochemical aspects of As Cd, Pb, Hg, CO,O<sub>3</sub>, PAN, pesticides, MIC and carcinogens in air.

**UNIT-IV. Water chemistry:** properties of water, water pollutants- sources & types - heavy metalsmetalloids, types of reactions in various water bodies including marine environment. Chemistry of oil based and water based paints, physico-chemical basis of redox processes. Electrochemical theory of corrosion.

#### **PRACTICALS**:

- 1. Determination of pH and Conductivity of different water and soil samples
- 2. Determination of calcium and magnesium by EDTA complex metric method
- 3. Determination of total dissolved solids in water samples.
- 4. Determination of Carbonates and Bicarbonates in water samples
- 5. Determination of Chloride in water sample by AgNO<sub>3</sub> method

- 6. Estimation of lodine value of given oil sample
- 7. Determination of copper content in industrial effluents by lodometric method
- 8. Determination of ferrous iron by permanganate method
- 9. Estimation of the amount of phenol/ Aniline in the water sample by Bromate- Bromide method
- 10. Determination of Saponification value of oil by C.A.T method

#### **REFERENCES:**

- 1. Analytical Chemistry of Industrial poisons, Hazards and solvents by Jacobs M.B.
- 2. Environmental Chemistry, Sharma B.K. & Kaur, Goel Publishing House Meerut, (1995)
- 3. Chemistry for Environmental Engineering, Sawyer C.N, Mc Marty P.L. and Perkin G.F. Mc Graw Hill, (II ed) (1994)
- 4. Environmental Chemistry, Tyagi O.D. and Mehra M Anmol Publications, (1990)
- 5. Environmental Chemistry, Manahan S.E, Lewis Publications, Florida, U.S.A, (7<sup>th</sup> ed), (2000)
- 6. Chemistry of the Environment, Bailey R.A. Academic Press, , (1970)
- 7. Vogel'sText book of quantitative Inorganic analysis Bernetts.J, Denney.R.C., Jeffery.J.H. and Mendham.J

### **COURSE-II : ENVIRONMENTAL GEOLOGY**

# Learning Objectives:

- \* Students will be able to identify igneous, sedimentary and metamorphic rocks based on its physical properties and chemical composition.
- \* To have basic knowledge about mineral resources of India and Karnataka.

# **Course Outcome:**

- \* Gain knowledge about the Earth's processes.
- Able to depict / analyse the Toposheets.

#### Pedagogy :

\* Field exploration studies will be made to collect and identify rocks and minerals. Practicals to assess their characteristics and classification will be carried out.

# **COURSE CONTENT:**

#### UNIT-I:

Environmental Geology – objectives, scope and necessity, Origin of the Earth, Earth systems and its interaction with - Lithosphere, atmosphere, hydrosphere and biosphere, Interior of the Earth, Earth's Materials – Minerals and their definition. Distribution and abundance of elements in the Earth's crust, Formation and classification of Rocks. Soil- characteristics, formation of soil, erosion and conservation.

UNIT-II:

Aa deg

Earth's Processes – Endogenic and Exogenic processes: Earthquakes, Tsunami and Volcanism. Geological agents: River, Wind, Glaciers and Ocean action. Floods, landslides, cyclone and avalanche, Concepts of major, trace and REE, Classification of trace elements, Mobility of trace elements, Geochemical cycles. Human use of trace elements and health.

# UNIT-III:

Mineral resources and environment. Resources and reserves, Depletion trends of natural resources. Environmental impact of exploitation, Land use Planning- Environmental aspects of terrain evolution, Methods of site selection and evaluation of land in environmental planning. Geological features of India and Karnataka.

# **PRACTICALS:**

- 1. Identification of Minerals and Rocks.
- a) Physical properties & chemical composition of various rock forming and economic minerals,
- b) Hand specimen study of Igneous, sedimentary & metamorphic rocks.
- 2. Classification of soils, sediment their texture, mineralogy
- 3. Interpretation of Toposheets

#### **REFERENCES:**

- 2. Encounter with the Earth, L.F. Oxford press, San Francisco., Laporte,
- 3. Soil and water conservation Engineering, Schwab. S.O, Frevert.R.K, Edimster. T.W. and Barns, K.K., John Wiley and Sons, 1975.
- 4. Land Application of Wastes, Loehr, R.C.Jesel, W.J.Novak, N.D., Clarkson, W.S. and Friedeman G.S., Van Nostrand Reinhold Co., New. York., Vol-I and II, 1979
- 5. Environmental Geology, Valdia K.S., 1987
- 6. The nature of Oceanic life, Menard H.W., W.H.Freeman and Company, San Francisco, The Ocean A Scientific American Book, (1969).
- Essentials of Geology, Reed Wicander & James S. Monroe, Wadsworth publishing company, (2002).

#### COURSE-III : ENVIRONMENTAL MICROBIOLOGY

#### Learning Objectives:

- Explain the microbial diversity of environment.
- \* Develop understanding in Bioremediation through microorganisms. Course Outcome:
  - Explain the classification and characteristics of microorganisms.
  - \* To have a basic idea about microbes in the degradation of wastes.

#### **Pedagogy** :

 Theoretical explanation and practical training for isolation, identification and characterization of microbes will be done using in vivo and in vitro methods.

#### COURSE CONTENT:

UNIT-I:

Introduction, Concepts and scope of environmental microorganisms as components of ecosystem, Classification and characteristics of Microorganisms, Microbial interactions. Micro organisms as bio-indicators in the environment, Role of microorganisms in CNS cycles.

#### UNIT-II:

Microbial diversity of environment: Microbes in air, water, waste water and soil; Introduction, distribution, sampling techniques and identification. Microbes of extreme environment. Mechanisms of adaptation by microorganisms to environmental extremes, Indicator organisms in waters, Ecological implication of genetically modified microorganisms.

#### UNIT-III:

Microbes in the degradation of wastes, Bioremediation-Its role in Environmental management, advantages and disadvantages. Control of pests and diseases by microorganisms, Treatment of solid and liquid industrial wastes, Microbial degradation of pesticides. Microbes in metal extraction, mineral leaching and mining, copper extraction by leaching and microbes in petroleum product formation.

# **PRACTICALS:**

- 1. Methods of collection preservation for microbiological studies
- 2. Serial dilution of soil and water
- 3. Preparation of different types of microbial culture media
- 4. Gram staining techniques
- Study of microorganisms in air
- 6. Isolation, enumeration and identification of microorganisms in soil samples
- 7. MPN techniques for coli form analysis
- 8. Effect of heavy metals on microbial growth
- 9. Effect of pesticide on soil microorganisms

#### **REFERENCES:**

- 1. Effect Environmental Microbiology Principles and Applications. Patrick K. Jemba.
- 2. Environmental Microbiology By. P D Sharma
- 3. Environmental bioremediation technologies. Shree N. Singh, Rudra D. Tripathi
- 4. Introduction to Microbiology. A. S. Rao
- 5. Microbiological examination of water and wastewater, Maria Csuros, Csaba Csuros.
- 6. Environmental Microbiology. Raina M. Maier, Ian L. Pepper, Charles P. Gerba Science.
- 7. Text book of Environmental, Microbiology, Mohapatra Technology & Engineering.

#### SOFT CORE

# **COURSE-IV : ENERGY AND GREEN TECHNOLOGIES**

#### Learning Objectives:

- \* Explain the renewable and non-renewable resources.
- \* Gain knowledge about energy management.

#### **Course Outcome:**

\* Enable the students to understand the principles of Green chemistry and its advances.

Casey

#### **Pedagogy** :

\* Phytoremediation techniques at laboratory level will be taught. Field trips are conducted to know about the energy plants and bio-energy resources

#### COURSE CONTENT:

#### UNIT-I:

Introduction – renewable energy sources, non-renewable energy sources, non-conventional and inexhaustible energy resources. Geothermal energy, wind driven power station, Tidal power plants, Glacier power plants, solar energy, nuclear energy, natural radio activity, nuclear power plant, fast breeder reactors, nuclear fusion, gober gas

#### UNIT-II:

Energy management – solar energy input conventional fuels – oil, coal, natural gas, uranium, risk of nuclear accidents, bio energy – biomass and biofuels, biogas- biogas technology, petroplants energy plantations and crops. Waste as renewable sources of energy- types of waste, classification based on chemical nature and physical state, composition of the waste, conversion of methane in to synthetic gas, factors effecting methane formation.

#### UNIT-III:

Green Technology: Phytoremediation- Hyperaccumulators- biotic interactions, biofilm, Green chemistry- introduction- inception and evolution- importance of solvents- types of catalysts and their role- Biological alternatives- applications. Principles of green chemistry, advances in green chemistry.

#### **PRACTICALS** :

- 1. Study and identification of energy plants
- 2. Adsorption and removal of chromium using different biomaterial
- 3. Adsorption and removal of iron using biomaterials
- 4. Study of biofuel /green chemistry / petroleum energy plants characteristics.
- To study the working principles of wind plant/ nuclear energy plant / Gober gas plant/Glacier plant

# **COURSE-V : ENVIRONMENTAL STATISTICS**

#### Learning Objectives:

- \* Get expertise in basic statistical methods to analyze environmental data.
- \* Analyze sampling techniques.

# **Course Outcome:**

\* Expertise to Analyze differences in mean values and frequencies and Calculate position and deviation measurements

**Pedagogy :** concepts of statistical methods are taught with various problems through examples

#### COURSE CONTENT:

#### UNIT-I:

Sampling- Types of sampling Descriptive Statistics, Descriptive vs. Inferential, Measures of location — mean, median, mode, Measures of dispersion — variance, standard deviation, range and interpercentile ranges., Dispersion Percentages, Skewness, Concepts of outliers, Correlation and regression-Bi-variate data and scatter diagram, Simple (linear) correlation and regression, Coefficient of correlation and regression and their properties, Fitting of regression line, Multiple and partial correlations and regressions. Graphs and Displays-Introduction, z-Scores and Percentile Ranks Stem and Leaf Displays

#### UNIT-II:

**Matrices and determinants-** Types of matrices, addition and subtraction of matrices, Multiplication of a matrix by a scalar, Products of matrices, Evaluation of  $2 \times 2$  determinants, Inverse of  $2 \times 2$  matrices, Combinations of transformations, Eigan value, Applications of matrices in Environmental Impact assessment.

#### UNIT-III:

**Probability-** Introduction, Random Variables, Definition, Expected Value, and Standard Deviation, Probability Distributions, Binomial and Poisson Distributions, **Statistical hypothesis testing-**The basic approach. Alternative hypotheses, Examples of bad practice, **One sample tests in environmental science-** Z-test on a mean with known variance, T-test on a mean with unknown variance, Z-test for non-zero correlation, **Two sample tests-** T-test on unpaired means with unknown variance, T-test on paired means with unknown variance, F-test for equal variances, Z-test for unpaired equal correlations, Chi Square test, ANOVA,

**UNIT-IV**: Introduction to environmental system analysis; Approaches to development of models; linear simple and multiple regression models, validation and forecasting, operating system, DOS UNIX, LINEX, M.S. Office, Computer applications in Environmental Sciences, point source stream pollution, model, box model, Gaussian plume model, General Circulation Model(GCM) for climatic change.

# PRACTICALS BASED ON THE ABOVE THEORY UNITS. REFERENCES

- 6. Statistical Methods, G. W. Snedecor & W. G. Cochran.
- 7. Statistics for environmental Biology and Toxicology, W. W. Piegorsh & A. J. Bailer.

# **COURSE-VI : ENVIRONMENTAL BIOTECHNOLOGY :**

#### **COURSE OUTCOMES :**

On successful completion of this programme, each student will be able to:

· Students will be able to learn the role of biotechnology in energy production and management.

Thaoez

- Gain scientific perspective for the biotechnological approaches for the degradation of dyes and effluents.
- To have a basic idea about GMO's and Genetic engineering approaches for waste and environmental pollution management

#### COURSE CONTENT:

#### UNIT-I:

Biotechnology and Biodiversity: conservation and utilization methods, their merits and demerits. Role of Biotechnology in energy production and management. Biosensors - Response of Biosensors, Types of biosensors, Application of Biosensors. Advantages of micro biosensors. Biochips – Biosurfactants,

#### UNIT-II:

Biotechnological approaches for the degradation of petrochemical, tannery, industrial wastes, natural dyes, synthetic dyes, semisolid sludge, paper and distillery effluents. Technologies for environmental monitoring with special reference to prevention and detection. Concept of GMO's and genetic engineering approaches to waste treatment and environmental pollution management.

#### UNIT-III:

Biotreatment of waste, Biofilters-types and applications. Bio fertilizer, importance and classification. Vermitechnology-vermicomposting and vermiculture. Role of biotic and abiotic factors in production of vermicompost. Organic farming and its applications. Microbial cellulolytic degradation of organic waste.

#### **PRACTICALS:**

- 1. Determination of anti oxidant capacity by phosphomolybdate method.
- 2. Study of biomass in polluted soil and water.
- 3. Determination of catalase activity in a water sample.
- 4. Study of cellulolytic degradation of organic waste.
- 5. Determination of sulphates in a given sample.
- 6. Determination of phosphates in a given sample.
- 7. Extraction of DNA from a tissue (mammalian liver/fish liver).
- 8. Extraction of RNA from plant/animal sours

#### **REFERENCE**:

- 1. Text book of Environmental Biotechnology by Pradipta Kumar Mohapatra
- 2. Text book of Environmental Biotechnology by Indu Shekhar Thakur
- 3. Text book of Biotechnology by R.C. Dubey
- 4. Text book of Environmental Biotechnology by B.D.Singh
- 5. Text book of Environmental Chemistry by Ajay Kumar Bhagi & G.R.Chatwal
- 6. Text book of Microbiology by Pelzar

# **COURSE-VII : ENVIRONMENTAL EDUCATION AND AWARENESS:**

# Learning Objectives:

- Acquire knowledge related to create environmental awareness.
- \* Strategize ecofriendly means for protection of environment.

Dage

#### **Course Outcome:**

- \* Development of audio-visual means for environmental education programs.
- \* Able to assess the present scenario of global environmental problems, solution and strategies formulated.

**Pedagogy:** Audio visual methods for teaching and interaction with students was employed. Group discussion on specific topics was encouraged.

# COURSE CONTENT:

#### UNIT-I:

Introduction, scope, knowledge about environment, environmental relationship and population growth, knowledge about solution and prevention of environmental problems rational uses of resources.

#### UNIT-II:

Goals and objectives of environmental education, PAP (Public awareness programme) strategies for environmental education - authorization, curriculum manual teaching methods and evaluations of environmental education.

#### UNIT-III :

Environmental movement – global national environmental movements, major environmental movements in India, Chipko, silent Valley movement, Appiko movement, Narmada Bachao Andolana, Tehri dam conflict.

# UNIT-IV:

Environmental conferences – importance goals and achievement. International agreements –, United Nations conventions on climate change, earth summit, Copenhagen summit.

#### SECOND SEMESTER

#### HARD CORE

# COURSE-I: WATER AND WASTEWATER MANAGEMENT:

#### Learning Objectives:

To have a basic knowledge of groundwater hydrology.

Theoley

- \* Discuss the water quality data.
- Explain the sources, causes, effects of wastewater and treatment of wastewater treatment.

#### **Course Outcome:**

- \* Explain the fundamentals of water chemistry.
- \* Identify the parameters that characterize the constituents found in potable water and wastewater.
- \* Illustrate the fundamentals of water and wastewater treatment.

**Pedagogy :** The course is taught using black board and projector. Practical training in the subject were given to students.

# **COURSE CONTENT:**

#### UNIT-I:

Hydrology, Sources of water and its characteristics, Distribution of water on Earth. Physical and Chemical properties of Water, Various types of water demands, per capita demand water quality standards for various uses. Water Pollution, Water quality standards for various uses, parameters, sources and types of Pollution, pollution scenario of Indian Rivers, water harvesting and watershed management.

#### UNIT-II:

Ground water Hydrology, Occurrence of groundwater, Ground water zones, and Groundwater System. porosity, permeability and types of Aquifers. The Water Table, ground water flow, functions and Topography, Ground water depletion, Ground water Quality, Ground water pollution, Saltwater Intrusion, Changes in Ground water Quality.

#### UNIT-III :

**Water purification-Screening** – Treatment system- sedimentation, coagulation, filtration – rapid sand filter, slow sand filter, advantages and disadvantages. Disinfections – Methods of disinfections, water softening process. taste and odor removal (Aeration).

Wastewater treatment: Characteristics of wastewater, Screening & Grit chambers primary treatment – sedimentation and flocculation, equalization, neutralization, secondary treatment

- Aerated lagoons, Trickling Filters, Activated Sludge process, Oxidation pond, Aerobic and Anaerobic decomposition of wastewater Tertiary treatment, sludge drying beds.

# **PRACTICALS:**

1. Determination of DO in water and wastewater samples

- 2. Determination of BOD
- 3. Determination of COD
- 4. Determination of porosity and permeability of different soils.
- 5. Determination of infiltration and runoff characteristics.
- 6. Determination of nitrite content of water samples
- 7. Determination of phosphate content of water samples
- 8. Visit to water & wastewater treatment plants

#### **REFERENCE**:

1. Water and waste water Engineering, Vol.I and II, Fair, G.M. Geyer T.C. and Okun. D.A. (1984): John Wiley and Sons, Strauss, (1975) & (1984)

- 2. Waste water treatment processes, Metcalf and Eddy Inc. Academic Press, New York. (1979)
- Standard Methods for Examination of Water and Waste Water American Public Health Association (5<sup>th</sup> Ed) (1980)
- 4. Waste Water Engineering, Metcalf and Eddy Tata Mc Graw Hill,
- Physico Chemical Process for Water quality, Weber. W.J, Ann Arbor. and company, New Delhi (1974)
- 6. Water and waste Engineering, Vol.I and II, Fair, G.M. Geyer T.C. and Okun. D.A. (1984): John Wiley and Sons, Strauss, (1975) & (1984)
- 7. Waste water treatment processes, Metcalf and Eddy Inc. Academic Press, New York. (1979)
- Standard Methods for Examination of Water and Waste Water American Public Health Association (5<sup>th</sup> Ed) (1980)
- 9. Waste Water Engineering, Metcalf and Eddy Tata Mc Graw Hill,
- 10. Physico Chemical Process for Water quality, Weber. W.J, Ann Arbor.

# **COURSE-II : OCCUPATIONAL HEALTH HAZARDS :**

#### Learning Objectives:

- \* Understand the physical, chemical and biological hazards in work places.
- \* Analyze different types of occupational hazards and the guidelines for their control to ensure safety of workers.

#### **Course Outcome:**

\* Conduct public health programs to create awareness about health hazards due to Environmental Pollution.

**Pedagogy :** The course is taught using traditional chalk and talk method. Students were taken to hospitals for studying the symptoms of the diseased patients.

#### COURSE CONTENT:

#### UNIT-I:

Occupational Environment- Physical, Chemical, Biological agent. Occupational hazardshazards, chemical hazards, Biological hazards. Occupational diseases- Pneumoconiosissilicosis, Anthracosis, Byssinosis, Bagassosis, Astertosis, Farmers lung, Lead poisoning, Occupational cancer, Occupational Dermatitis, Radiation hazards.

#### UNIT-II:

Occupational hazards of agricultural workers- somatic diseases, accidents, toxic hazards, physical hazards, respiratory diseases, accidents in industry, sickness absenteeism, health problems due to industrialization.

#### UNIT-III:

Measures for health protection of workers, preservation of occupational diseases- medical measures, engineering measures, Legislation- The factories Act, 1948. Human health problems due to pollution, public health programs, food poisoning- types of food poisoning prevention and control, indicators of health.

#### **PRACTICALS** :

- 1. Study of Byssinosis
- 2. Study of bagassosis and
- 3. Study of pneumoconiosis
- 4. Documentation of Allergic diseases and causes
- 5. Safety devices in industries
- 6. Survey and documentation of occupational diseases and causes in given areas
- 7. Respiration disorder in industrial workers.
- 8. Occupational health hazards in agricultural workers.

#### **REFERENCES**:

- 1. Fundamental principles of occupational health and safety. Benjamin O. Alli Handbook of Occupational Safety and Health, Louis J. Diberardinis,
- 2. Environmental Hazards: Assessing Risk and Reducing Disaster, Keith Smith, David N. Petley.

- 5. Implementation of occupational health legislation at work place, issues and concerns. G. K. Kulakarni.,
- 6. Disaster Management future challenges and Opportunities by Jagbir Sing, I.K. International.

# **COURSE-III : ADVANCED INSTRUMENTATION :**

#### Learning Objectives:

\* A comprehensive understanding of the principles of environmental chemistry, Tools and techniques of sample analysis, knowledge of instrumentation.

# **Course Outcome:**

- \* To know the utility and basic knowledge of UV-Visible ,IR ,NDIR sensor, AAS, Nephelometry, Turbidometry, Ploarography, TLC, GC, HPLC and Ion exchange chromatography for the characterisation of compounds.
- \* **Pedagogy :** The subject is taught with practicals related to theoretical aspects. Methods and sample collection and analysis of air and water samples will be trained for students.

#### **COURSE CONTENT:**

#### UNIT-I:

Optical methods: Various ranges of electromagnetic radiations, interaction of electromagnetic radiation with matter, UV-Visible spectroscopy: Theory, instrumentation and applications to environmental samples, optical fibers in spectroscopy. X-ray fluorescence, X-ray diffraction.

UNIT-II:

IR and NDIR spectroscopy: Molecular vibrations and vibration frequencies, special features of IR and NDIR instruments. Applications for the environmental samples. Continuous monitoring of CO using NDIR spectroscopy. Atomic Absorption Spectrophotometer, principles, instrumentation and applications in environmental sample analysis. Atomic Emission Spectroscopy-Principle, instrumentation and applications of flame emission spectroscopy.

#### UNIT-III:

Nephelometry and turbidimetry: Principles and applications in the determination of turbidity of water. Thermo quality Radio analytical methods: Radiochemical techniques- Principles and applications of neutron activation analysis and isotope dilution analysis. Polarography: Principles, instrumentation and applications of polarography in the environmental sample analysis. Solvent extraction, thin layer chromatography, gas chromatography, HPLC and Ion exchange chromatography.

#### **PRACTICALS:**

- 1. Spectrophotometric determination of trace elements
- 2. Conductometric titration of water & Soil extract samples.
- 3. Extraction of plant pigments and study of TLC and column chromatography
- 4. Determination of Fluorides by spectrophotometry
- 5. Determination of Organic carbon in soil by titrimetric and spectrophotometric methods
- 6. Potentiometric titration of Non-aqueous solvents.
- Determination of Nitrite/Nitrate/Total nitrogen/Ammonia nitrogen in water and soil samples.
- 8. Determination of sodium and potassium by flame photometry
- 9. Determination of pesticides by Gas chromatographic method.
- 10. Determination of phosphate by Molybdate method
- 11. Determination of SO<sub>2</sub> in air sample by para- rosaniline method

#### SOFT CORE

# **COURSE-IV : ENVIRONMENTAL TOXICOLOGY :**

# Learning Objectives:

\* Students will be able to learn the role of biotechnology in energy production and management.

Dadey

\* Gain scientific perspective for the biotechnological approaches for the degradation of dyes and effluents.

#### **Course Outcome:**

\* To have a basic idea about GMO's and Genetic engineering approaches for waste and environmental pollution management

#### **Pedagogy**:

Theoretical explanation and practical training was done using in vivo and in vitro methods.

#### COURSE CONTENT:

#### UNIT -I:

Introduction to toxicology, scope of toxicology subspecialties of toxicology, description and terminology of toxic effects, factors influencing toxicity, drug toxicity, biochemical basis of toxicity – mechanism of toxicity and receptor mediated events, acute and chronic toxicity. Selective toxicity. Dose response relationship-graded response time action curves, threshold limit value, LC<sub>50</sub> LD<sub>50</sub>, Margin of safety and toxicity curves.

#### UNIT - II:

Bioaccumulation and Biomagnifications of toxic materials in food chain, Toxicology of major pesticides-Environmental impacts of pesticides, biotransformation, biomonitoring, programs and parameters of biomonitoring, concept of bioindictor, bioindicator groups and examples. Basic concepts of Environmental forensics.

#### UNIT – III :

Concepts of Bioassay- types, characteristics. Importance and significance of bioassay, Field based microbial bioassay for toxicity testing, particulate matter sources health impacts of specific particulate matter, chronic and accote effects of particulate matter on respiratory system mechanism of impact of particulate matter on cardio vascular system.

#### **PRACTICALS:**

- 1. Determination of solid food adulteration.
- 2. Methods of prevention of food poisoning.
- 3. Determination of liquid food adulteration.
- 4. Estimation of LC<sub>50</sub> value in mosquito larvae.
- 5. Determine the histo toxicity/ histopathology of a given sample.
- 6. Spot test for the detection of nitrate/nitrite poisoning.
- 7. Histological processing of organs for toxicological tests
- 8. Determination of fluoride content in a given sample.
- 9. Determine the differential leukocyte count (DLC) of the pesticide treated blood smear.
- 10. Par fins sectioning and staining techniques
- 11. Determination of toxic chemicals in different samples.

#### **REFERENCE:**

- 1. Environmental biology and Toxicology, by Sharma P.D. Rastogi and Lamporary., 1994.
- Environmental pollution and Toxicology by Meera Asthana and Astana D.K., Alka printers, 1990.
- 3. Toxicology, by A.Sood, Sarup and sons New Delhi, 1999

Dovery

- 5. Environmental Epidemiology, by Anisa Basheer, Rawat Publication Jaipur, New Delhi 1995.
- Toxicology, Biochemistry and Pathology of Mycotoxins, by Kenji Uroguchi a mikio, Yamazadi Kodanshoa Ltd., Tokyo, 1978.

#### COURSE-V : REMOTE SENSING AND GIS :

#### Learning Objectives:

- \* To have a fundamental knowledge of Remote sensing and GIS.
- \* Gain knowledge about sensors, its types and applications.

#### **Course Outcome:**

 Develop understanding about the applications of Remote sensing and GIS in Resources management, monitoring of wildlife and also coastal zone management.

**Pedagogy :** Subject is taught using black board, reference materials and field survey data and analysis.

#### COURSE CONTENT:

#### UNIT-I:

Fundamentals of Remote sensing: 1 Remote Sensing – history & development, definition, concept and principles, Energy Resources, radiation principles, Electromagnetic radiation, Interaction be ween matter and Electromagnetic radiation, Sensors: Types of sensors, Concept of Resolution – Spatial, Spectral, Temporal, Radiometric, Basic concept and principles of Thermal, microwave and hyper spectral sensing, Spectral reflectance and their characteristics of Earth surface features,

#### UNIT-II :

Platforms –Products used in Remote sensing, Images, scale, mosaics, time and seasons of orbital cycles. Aerial photographs, photographic systems, Satellite data products. Photogrammetry – Basic principles, types, steps and elements of image interpretation, visual interpretation, interpretation equipments- digital image processing- image rectification, enhancement, classification, data marging and biophysical modeling- image processing software. Satellites and their characteristics – Geo- stationary and sun-synchronous, Indian Space programme

#### UMIT-III:

Introduction to GIS: GIS and their uses for Environmental monitoring, Remote Sensing Data Products and their procurement, GIS and spatial distribution of environmental data, Data integration and analysis, Data based structure, satellite data analysis, GIS software. Remote sensing and GIS applications - Management and monitoring of Environment, conservation of resources, natural resources, coastal zone management.

#### **PFACTICALS:**

1. Survey of a given area using Chain survey method

Radey

- 2. Survey of a given area using Plane table survey method
- 3. Survey of a given area using Compass survey method
- 4. Survey of a given area using GPS survey method
- 5. Image interpretation of land use/water, vegetation and lithology
- 6. Study of geological /contour/drainage pattern maps
- 7. Assessment of pollution status of the given map

# **REFERENCE** :

- 1. Environmental Radioactivity from Natural, Industrial and Miltry sources, Merril Eisenbud and Thomas Gessell Academic Press, London
- 2. Radiation and Man Jain.H.C, National Book trust, New Delhi
- 3. Remote Sensing a better view Rudd.R.D. (1974)
- 4. Remote sensing techniques for Environmental Analysis, Estes. J.E. and Senger.L.W
- 5. Remote sensing of Environment Lintz.J and Simonnet.D.S (1976)
- 6. Remote Sensing and GIS for Environmental Planning Murli Krishna.I.V. (1995).
- 7. Essential of Remote Sensing (S.Srikantaswamy 2008)

#### THIRD SEMESTER

#### HARD CORE

#### COURSE-I: ENVIRONMENTAL BIOLOGY:

# Learning Objectives:

- \* Students will be able to articulate the basic structure, functions and processes of systems affecting the environment.
- \* Gain knowledge about environmental factors and its impact on life systems.
- \* Give basic knowledge about biological interactions in an environment.

# **Course Outcome:**

- \* Update the demographic status.
- \* Gain knowledge on biological means of assessing the water quality.
- \* Helpful in the assessing the impact of environmental factors on plants and animals

**Pedagogy:** The course is taught using traditional chalk and talk method. Practicals and field work were carried out.

#### COURSE CONTENT:

#### UNIT-I:

Ecosystems- Structure, functions, biotic and a biotic component, food chain, types of food chain, food web, Diversity Stability rule Homeostasis. Ecological niche, special functional, Ecological Dominance. Energy flow in ecosystem, Lindeman model Ecotone & Edge effect, Ecological Pyramids.

UNIT-II:

Environmental factors- Limiting factors Ecofurm & Edge effect: climatic factors, influence of light on morphology and physiology of plants, characteristics of heliophytes and sciophytes, temperature – thermo periodicity, effect of low and high temperature on plants and animals. Atmospheric humidity-relative humidity in relation to metabolism of organism with suitable examples. Windmechanical effects of wind; lodging, breakage, deformation, anemophily and anemochory, physiological effects of wind. Edaphic factor-soil complex-soil erosion and soil conservation.

#### UNIT-III:

Population ecology. Characteristics, population density, natality, mortality, age distribution, population growth, causes for population explosion, population control. Biological interactions-Interspecies and interspecies interactions, types of interspecific interaction- neutralism, positive interaction- negative interactions, both positive and negative interactions-Amensalism, mutualism, commensalism, parasitism and predation.

#### PRACTICALS:

- 1. Study of binocular compound microscope/ Positive/ Negative staining of bacterial sample
- Study of microbial flora/planktons found in water/soil samples including pond bottom sediments
- 3. Determination of Total alkalinity of different water samples
- 4. Estimation of chloride in the water samples
- 5. Determination of DO in water sample modified Winkler's method
- 6. Estimation of Nygaard's algal indices in a given water sample
- 7. Identification of specimen/culture/materials of ecological interest definition and hardness
- 8. Determination of Total Hardness of different water samples

#### **REFERENCES:**

- 8. Cell biology and evolution. P.S. Verma and Agarwal I ed. Chand and company, New Delhi (1974)
- 9. Cell Biology- by De-Roberties
- 10. Animal behavior M.P.Arora, Himalaya Publishing House.

# COURSE-II : SOLID WASTE MANAGEMENT :

#### Learning Objectives:

- \* Understand the practices of municipal solid waste management, their characteristics, composition and classification.
- \* Gain knowledge to select the appropriate method for waste collection, transportation, storage and redistribution of solid waste.
- \* Methods of disposal of hazardous solid waste

 Gain scientific perspective of waste management through reuse and recycling process of solid waste

#### **Course Outcome:**

- \* Knowledge on types of waste and its management
- Management of wastes for sustainable living

#### Pedagogy:

The course is taught using traditional chalk and talk method. Visual models were employed. Methods and sample collection and analysis of waste samples will be trained for students.

#### COURSE CONTENT:

#### UNIT-I:

Waste – Introduction, sources, characteristics, composition, classification, waste generated per capita-Global scenario. Solid Waste – collection, Storage, segregation- transportation and disposal methods-sanitary land fills and types, composting, anaerobic digestion, incineration, types of incineration, pyrolysis and medical waste, technology options for biomedical waste treatment

#### UNIT-II:

Hazardous waste-Introduction, characteristics, resource conservation and recovery act, listed hazardous waste, listing criteria. Classification of hazardous waste and handling of hazardous solid wastes.

Radio active wastes- sources, pollution, types of radioactive waste and its control and management.

#### UNIT-III:

Waste management – waste minimization program, typical material recovery facility operation (TMRF), Reuse and recycling of paper, glass, rubber. Plastic waste status in India, effect of plastic wastes on environment, management of plastic waste, e- waste management.

#### **PRACTICALS:**

- 1. Characterization of solid waste from different sources.
- 2. Designing of secured/sanitary land fills.
- 3. To study of methods of management of biomedical waste.
- Characterization of (TCLP) toxicity characteristic leaching test procedure hazardous waste from different sources.
- 5. Octevmination of organic carbon in compost.
- 6. Field trip to municipal solid waste/zero waste management sites/ Biomedical waste plant.
- 7. Determination of inorganic phosphate in leachate samples.
- 8. Determination of total nitrogen in leachate
- 9. Determination of TSS/TDS in leachate sample.

#### **REFERENCES**:

- Bioremediation- Principles, Eweis, J.B.Ergas S.J.Change, D.P.Y and Schroeder, E.D. Graw Hill Inc., (1998)

#### **COURSE-III : AIR, NOISE AND RADIATION POLLUTION :**

# Learning Objectives:

- \* Analyse different types of pollution.
- \* Understanding the mode of various health effects triggered by air, noise and radiation pollution.

#### **Course Outcome:**

- \* Analyse the guidelines for the pollution control in the context of public health.
- \* Get expertise in measuring noise level and radiation levels at different sites in different environments.

**Pedagogy:** The course is taught using traditional chalk and talk method. Practicals and field work were carried out.

#### COURSE CONTENT:

#### UNIT -I:

Air pollution; Natural and anthropogenic sources. Transportation and dispersion of pollutants, Gas laws governing the behavior of pollutants in atmosphere, Properties of air pollutants, Air quality: air quality monitoring- objectives, conventional monitoring, Non conventional approaches, sampling methods, gaseous sampling, stack monitoring, monitoring of particulates and smoke- Air quality standards.

#### UNIT-II:

Air pollution effects on vegetation, animals and humans, Air pollution control measures. Indoor Air pollution: Sources-Indoor chemicals used, Checking the Indoor pollution, Indoor air quality. Odour pollution of air, preventive measures of odour pollution, Vehicular Pollution: Automobile emission-Types of emissions- Exhaust emissions, evaporative emissions, crank-case emissions. Prevention and control of vehicular pollution.

#### UNIT-III:

Noise. Source of noise, Reasons for Noise pollution, physical characteristics of sound waves: anatomy of sound, Theory of noise measurement – Sound pressure, loudness, sound intensity. Effects of noise pollution- Physico-chemical, social and psychological effects of noise, Prevention and control of noise pollution, Industrial noise control. Government rules to check noise pollution.

Rase

#### UNIT-IV:

Radioactivity-Introduction, Disintegration types, units of radioactivity, interaction of radiation with matter, ionization types of exposure, detection and measurement of radiation, Dosimeters, Biological effects of radiation. Stochastic and deterministic effects, Radiation protection, system of dose limitation, protection methodology.

#### **PRACTICALS**:

- 1. Determination of SO<sub>2</sub> by PRA method
- 2. Determination NO<sub>x</sub> by spectrophotometric method
- 3. Basic radioactive measurement procedures using GM counter
- 4. Studies on indicators of air pollution
- 5. Measurement of noise level in different environments by sound level meter (SLM)
- Determination of particulate matters PM<sub>10</sub> and PM<sub>2.5</sub>
- 7. Field visit to assess air and noise pollution.
- 8. Determination of radiation in a given area using dosimeter

#### **REFERENCES:**

- 5. Environmental Chemistry, Manahan S.E, Lewis Publications, Florida, U.S.A, (7<sup>th</sup>ed), (2000)

#### SOFT CORE

#### COURSE-IV : EIA, ENVIRONMENTAL POLICY AND LAWS :

#### Learning objectives:

- \* To give students a comprehensive understanding of environmental impact assessment, auditing, policies and laws.
- Gives Knowledge of legislation, parameters to be considered for policy and decision making

#### **Course Outcome:**

\* To have a basic idea about legislation related to control of environmental pollution in India.

Pedagogy: Theory was taught using examples from case studies.

#### COURSE CONTENT:

#### UNIT-I:

Origin and development of EIA, Assessment and Prediction of impact on Air water, noise and biological environment. Methods of impact analysis, public participation in Environmental decision making, Risk Assessment, mitigation measures.

#### UNIT-II:

Environmental Audit: General approaches to Environmental Auditing, Audit methods, benefits of environmental auditing. On-site and Post - Audit activities, statutory Environmental statements.

#### UNIT-III:

Planning: Importance of planning, local, regional, state and national planning. Zoning-Physical planning. National policy, sectorial - integration, state level policy and implementation. Organizational structure at state and central governmental levels.

#### UNIT-IV :

Legal control of Environmental pollution in India with special reference to :

- i. The Wildlife protection Act - 1972
- The Water prevention and control of pollution Act, 1974, amended 1988: CESS Act 1977, ii. amended in 1991.
- iii. The Forest Conservation Act, 1980, amended in1988.
- iv. The Air prevention and control of pollution Act, 1981, amended in 1990.
- v. The Environment protection Act. 1986.
- vi. Hazardous waste management rules-1989 & amendment rules
- vii. Municipal waste management rules 2000

# **COURSE-V : CLIMATE CHANGE AND CURRENT ISSUES :**

#### Learning Objectives:

- Students will be exposed to current global environmental problems and issues.
- Learn about ecological implications of climate change
- Gain knowledge about global warming, green house gases and eutrophication.

Lavey

#### **Course Outcome:**

Enable students to learn strategizing for healthy environment.

Pedagogy: The course is taught using traditional chalk and talk method.

#### COURSE CONTENT:

#### UNIT-I:

Global Environmental problems - Ozone depletion, causes and effects. Acid Rain- How acid rain is formed, adverse effects of acid rain. Photochemical smog, Factors responsible for photochemical smog.

#### UNIT-II:

Green house gases – green house effect and climate change Global warming facts– Effects of Global warming – control and remedial measures of green house effect, global warming and climate change, impacts of sea level rise

#### UNIT-III:

Man and Ecodegradation of Natural Environment, Present status of wasteland in India. Problems and prospects of wasteland development. Wasteland reclamation through Social Forestry, Bioaesthetic planting for pollution abatement.

#### UNIT-IV:

Eutrophication and restoration of Lakes. Drug abuse and alcoholism as a threat to environment. Environmental ethics - stewardship ethics and lifeboat ethics of Garret Hardin. Fly ash utilization, wet land conservation, environmental disaster (man made) episodes; Mina mata, itai itai, London smog, Los Angeles smog, Bhopal gas tragedy.

#### FOURTH SEMESTER

# COURSE-1 : CONSERVATION OF BIODIVERSITY:

#### Learning Objectives:

- Update the knowledge related to biodiversity in the current context.
- \* Gain knowledge to find solutions to man-wildlife conflict.

#### **Course Outcome:**

- \* Helps in identification of endangered flora and fauna and its ecological features .
- \* Practical knowledge on vegetational studies and conservation of flora and fauna will be acquired.

# Pedagogy:

- \* The course is taught using traditional chalk and talk method. Visual models were employed.
- \* Practical training was given in the field as well as laboratory.

# COURSE CONTENT:

#### UNIT-I:

Biodiversity – Genetic diversity, Species diversity and ecosystem diversity, alpha, beta, and Gamma diversity, values of Biodiversity – consumptive use value, optional values, productive use value, social value. Biowealth, endemism, significance of the endemism, Hot spots of Biodiversity,

#### UNIT-II-

Brief account of endangered flora and fauna of India. Red data book and IUCN categories, endangered species, vulnerable species. Rare species. Man- Wildlife conflicts. Ecological consequences of reduction in biodiversity. Biodiversity issues – Deforestation and its impact. Two paradigms of Biodiversity, Convention on Biological diversity (CBD), Man and biosphere programme (MAB).

#### UNIT-III:

Causes for depletion of biodiversity in India, Biodiversity in Karnataka, conservation measures of biodiversity in Karnataka, Sacred grooves. Prospects and Perspectives of keystone species with special reference Tiger.

#### UNIT-IV:

Biosphere Reserves – concept of conservation – objectives and management, Nilgiri Biosphere Reserve - Biosphere Reserves in India, *In situ* and *ex situ* conservation, Role of Zoos, National Parks and Sanctuaries in conservation, Biological Diversity Act of India

#### **PRACTICALS:**

- 1. Determination of density of species using quadrat method
- 2. Determination of suitability point of a vegetation
- 3. Determination of frequency and relative frequency of species in a given area
- 4. Determination of abundance of species in a given area
- 5. Identification of endangered species of flora and fauna
- 6. Economic potentialities of selected plants and animals
- 7. Visit to National parks and sanctuaries
- 8. Identification of ecological features of selected flora and fauna.
- 9. Study of adaptive features of hydrophytes
- 10. Study of adaptive features of xerophytes

#### **REFERENCES**:

Tadey

# COURSE-II : MAJOR PROJECT WORK COURSE OUTCOMES :

#### **PEDAGOGY**:

#### **COURSE CONTENT:**

#### SOFT CORE

#### COURSE-III : DISASTER MANAGEMENT :

#### Learning Objectives:

- \* Develops understanding the foundations of hazards, disasters and associated natural phenomena.
- \* To have basic idea about natural and man made hazards for the disaster.
- \* Ecological implications and Climate change

#### **Course Outcome:**

- \* Implement and evaluate research on disasters.
- \* Provide inputs for disaster management.

Pedagogy: The course is taught using traditional chalk and talk method.

#### **COURSE CONTENT:**

#### UNIT-I:

Environmental Disasters- Types of Hazards- Natural and Man made hazards- Nature of Hazards, Environmental security and Hazard zoning. Strategies of hazard mitigation. Concept of residence time and rates of natural cycles. Catastrophic- geological Hazards. Earthquake and seismic Hazardseffects of earthquake, stability of structures and risk evaluation, seismic topography. Prediction of earthquake, Volcanic Hazards- Nature of volcanic hazards, volcanic belt, prediction and mitigation of volcanic Hazards.

#### UNIT-II:

Landslides and Mud flows- Types of mass movement, strength of materials and instability of slopes, controlling the landslides. Floods and flood management- causes of floods, management of floods. Floods control methods. Avalanches- Types of avalanches monitoring of avalanches.

#### UNIT-III:

Man made Disasters and Hazards- Improper Irrigation, deforestation, Industrial hazards- safety in industry. Management of dangerous materials in Industry, Safety system in industry. Disaster and accident prevention. Safety versus production.

# **COURSE-IV : MARINE ECOLOGY AND COASTAL POLLUTION :**

#### Learning Objectives:

- \* :Identify Phytoplanktons and Zooplanktons in marine ecosystem
- \* Development of skills to assess the marine water quality.

#### **Course Outcome:**

- \* Gain knowledge on sustainable use of marine resources and their conservation.
- \* Assessment of coastal pollution status and formulation of pollution abatement strategies.

Pedagogy: The course is taught using traditional chalk and talk method. Practicals and field work were carried out.

# **COURSE CONTENT:**

#### UNIT-I:

Marine ecology; Introduction to marine environment marine bioresources and their economic importance, sources and causes for marine pollution, effect of oil on marine environment, sea level rise and erosion, Tides and types of tides.

#### UNIT-II:

Coastal pollution; Man made pollution causing coastal pollution, coastal dumping, Status of biodiversity in coastal area, Brief account of benthic fauna, coral reefs and their economic importance.

#### UNIT-III:

Sustainable use and conservation of marine living resources, marine environmental protection, Sustainable development of small islands. Conventions related to marine and coastal environment.

#### UNIT-IV:

Coastal zone management - Specific issues: Habitation, Agricultural land, shrink area, industries, gas fields and sunderban. Ecologically sound coastal zone management program.

# **PRACTICALS:**

- 1. Study of phytoplanktons commonly in marine water.
- 2. Study of Zooplanktons marine water
- 3. Study of marine benthic community
- 4. Study of chemical parameters of sea water (pH, conductivity salinity, phosphate).

Hodee 7

5. Study tour to explore marine ecosystem.

#### **OPEN ELECTIVE**

#### **COURSE-I: ENVIRONMENT AND HEALTH**

#### Learning Objectives:

- Describe the consequences of pollution on human health
- Evaluate the relations between environment human and health
- Knowledge on international agreements to reduce pollution

#### **Course Outcome:**

\* Apply risk management principles to anticipate, identify, evaluate and to control physical, chemical and biological hazards.

Pedagogy: The course is taught using traditional chalk and talk method.

# **COURSE CONTENT:**

#### UNIT-I:

Environmental Health Problems: Health problems related to the environmental degradation, vulnerable groups in society. Environmental factors that can potentially affect health environment and health indicators, major environmental and health issues, Specific pollutants or issues, in indoor and outdoor environment Health problems, Human Bio monitoring.

#### UNIT-II:

Environmental Risks and the Disease Burden: Environmental risks and the disease burden in different regions of countries and in India, Environmental factors the burden of disease in India. The health effects of air pollution. Health risks associated with agricultural and industrial pollution.

#### UNIT-III:

Environmental Health Risk Assessment and intervention : Introduction, the Determination of risk, Risk assessment, Risk assessment methods, Risk monitoring, Risk communication, protecting the public, Risk assessment in public health, Environmental impact studies.

#### UNIT-IV:

Occupational hazards of agricultural workers somatic diseased, accidents, toxic hazards, physical hazards, respiratory diseases, accidents in industry, sickness absenteeism, health problems due to industrialization.

# COURSE-II : ECOTOURISM AND WILD LIFE MANAGEMENT

# Learning Objectives:

- \* Able to define the concepts of ecotourism
- \* Explain the characteristics, principles and objectives of ecotourism.
- \* To solve problems related to wildlife conservation and management

# **Course Outcome:**

- Gain knowledge on wildlife conservation and management
- \* Legislative measures for protection of wildlife

**Pedagogy:** The course is taught using traditional chalk and talk method. Visual methods for teaching and interaction with students was employed.

#### COURSE CONTENT:

#### UNIT-I:

Ecotourism Concept, definition, scope, characteristics, ecotourism in India, principles and objectives of ecotourism, Advantages and disadvantages of ecotourism.

#### UNIT-II:

Environmental impacts of ecotourism- Possible and negative impacts- marketing trends in ecotourism, Beach ecotourism and beach pollution, Sustainable Beach ecotourism.

#### UNIT-III:

Role of environmental education in ecotourism, ecotourism as a conservation tool for wild life ecotourism and sustainable development, Best practices of ecotourism, do's and don't s of ecotourism, World ecotourism summit, 2002.

#### UNIT-IV:

Status of wildlife management in India, Prospects and perspectives of project Tiger in India, Status of Tiger population in world and India, Medicinal importance of t iger parts, conflicts between man

Dacy

and elephants, Economic potentialities of Tiger. Priorities in wildlife conservation.

# **COURSE-III : ENVIRONMENTAL POLLUTION AND MANAGEMENT**

# Learning Objectives:

- \* Provides a comprehensive overviewed of air, water, soil, noise and radiation quality. Monitoring and control.
- \* To identify the source of pollution
- \* To explain the characteristics and classification of pollutants.

#### **Course Outcome:**

Understand the concepts involved in control and prevention of various pollution.

Pedagogy: The course is taught using traditional chalk and talk method.

#### **COURSE CONTENT:**

#### UNIT-I:

Water and Thermal pollution- Introduction, types of water pollution, sources of water pollution, effects of water pollution, Primary, Secondary, Tertiary and Advanced treatments for control of water pollution, Thermal pollution- sources, harmful effects, prevention and control.

#### UNIT-II:

Classification of atmosphere, Air pollution- sources, classification, properties of air pollutants, effects of air pollution on plants and human beings, Control methods for industrial air pollution-fugitive emission and source emission. Automobile pollution and mitigation measures.

#### UNIT-III :

Soil pollution and Noise pollution- Soil pollution- sources, effects and control measures, noise pollution, sources, effects and control methods. Measurement of noise pollution.

#### UNIT-IV :

Radiation and Biopollution- Radiation pollution- types of radiation: no ionizing and ionizing, alpha, beta and gamma radiations, cosmic rays and X-rays, sources of radioactive pollution, impact of

Jace

radiation pollution on human health, preventive measures, biopollution- aeroallergens, pollen grains, fungi, biopollutants as biological components.

#### COURSE-IV : ENVIRONMENTAL PLANNING AND SUSTAINABLE DEVELOPMENT

#### Learning Objectives:

- \* Assessment of suitability of land for sustainable use
- \* To Understand the role of NGO's in sustainable management of resources
- \* Impact of urbanization Environment

#### **Course Outcome:**

\* Evaluation of sustainable development in rural and urban environment

**Pedagogy:** The course is taught using traditional chalk and talk method. Group discussion with case studies were employed.

#### COURSE CONTENT:

#### UNIT-I:

Sustainable Development – scope & definition, parameters of sustainability, Population stabilization, integrated land use planning, Healthy cropland and grassland, wood land revegetation, conservation of biological diversity, control of pollution, development of non-polluting renewable energy systems. Recycling of wastes/residues, ecologicaly compatible human settlement and slum improvement, environmental education and awarness, updating environmental law.

#### UNIT-II:

Agriculture – sustainable agricultural rotation of crops, organic farming. Environmental degradation due to pesticides and chemical fertilizers- Sustainable Management.

#### UNIT-III:

Environmental movements and role of NGO's in sustainable development. Global policy for sustainable development – world summits.

#### UNIT-IV :

Urbanization and its impact on Environment. Rural and Urban planning for sustainable development.

# **COURSE-V : NUCLEAR AND BIOMEDICAL WASTE MANAGEMENT**

# Learning Objectives:

- \* Describe the composition of nuclear waste
- \* To gain the knowledge on the nuclear waste management techniques and management plans.

# **Course Outcome:**

\* Formulation of design, operation and management of nuclear and biomedical waste

**Pedagogy:** The course is taught using traditional chalk and talk method. Visual methods for teaching was employed.

#### COURSE CONTENT:

#### UNIT-I:

Nuclear wastes – composition, Decay, scenario of nuclear wastes in the soil, nuclear fuel cycle, Nuclear energy, Management techniques-simple and high level nuclear waste management – Geological disposal. National & International management plans.

#### UNIT-II:

Introduction, quality of hospital waste, sources of biomedical waste, classification and sources, pathological wastes, sharp pharmaceutical wastes, Genetonic wastes, Chemical wastes, waste contaminated with heavy metals.

#### UNIT-III:

Measures to reduce biomedical wastes, Treatment of hazardous biomedical wastes, Biomedical waste management in developed countries and in India – legal aspects.

#### UNIT-IV:

E-waste, composition, sources. E-waste management in global and national scenario Recycling and disposal strategies.

#### **COURSE-VI : ECOLOGY AND ENVIRONMENT**

## Learning Objectives:

ž

- Concepts of different ecosystem
- Population dynamics in ecosystem
- \* Ecological adaptive features of flora and fauna

# **Course Outcome:**

- \* Knowledge on role of species in adaptation and functioning
- Population stabilization

**Pedagogy:** The course is taught using traditional chalk and talk method. Visual methods far teaching and interaction with students was employed.

#### COURSE CONTENT:

#### UNIT-I:

Funcamentals of Ecology- Definition, principles, and scope of ecology, objectives and subdivisions. Concept of levels of organization, Ecological Dominance, Population ecology. Characteristics, population density, natality, mortality, age distribution, population growth, causes for population explosion, population control.

#### UNIT-II:

Ecosystems- Structure, functions, biotic and a biotic component, food chain, food web, Homeostasis, Ecological Niche, Ecological Dominance. Types of ecosystems : aquatic and terrestrial ecosystem.

#### UNIT-III:

Resources of environment – Habitat- classification – reasons for depletion of natural resources – conservation of natural resources ; air, water, soil, minerals, forests & wildlife.

#### UNIT-IV:

Ecological Adaptation ; ecological adaptation of hydrophytes, ecological adaptation of mesophytes, ecological adaptation of xerophytes, ecological adaptation of halophytes. Deep sea adaptation, performingulatory adaptation
