## CLOUD COMPUTING AND ITS APPLICATIONS IN LIBRARIES

Nagesh R and and Dr. Chandrashekara M.

## Introduction

The world of library and information science has expanded dramatically over a last few decades mainly due to the developments in information technology. In 21st century web technologies, epublishing, and open access have reinforced libraries to reach beyond the physical or social barriers. Modern libraries are converting gradually into digital libraries. The introduction of cloud computing and virtualization technologies have made for important achievements in information access and handling(Upadhyaya, Ahuja, & Sharma, 2019). Libraries are using computers for running services such as Integrated Library Management Software (ILMS), website or portal, digital library or institutional repository, etc. Now libraries are other or and desktops, collaborating with other campus organizations and saving money and staff time" (Hughes, 2019).
