INDIAN WOMEN MATHEMATICS SCIENCE AND TECHNOLOGY

Dr. Syeda Rasheeda Parveen
HOD & Assistant Professor in Mathematics
Government First Grade College
Karnataka

Abstract

Women scientists in the developing world are often tied to their societies' cultures and institutions. In science, technology, engineering, and mathematics (STEM), women are expected to experience rapid growth in the 21st century. However, a gender gap in STEM persists across the world. There were many young girls who might have settled down as school teachers or lecturers in their home countries. Women, in general, were not encouraged to pursue a career if they excelled in their studies. Their parents' intentions, usually got them married off by the time they were most... In India, there were a lot of societal pressures on women from returning to higher studies or starting a child birth as it was difficult to maintain a balance between work and family.

Keywords: Science and Technology (ST), Mathematics, Computer Industry

Introduction

Women in Science and Technology

Women play an important role in the development of contemporary society. They make great contributions to the development and improvement of life. Unfortunately, science and technology are not fields where women do not have equal possibilities of success. There are many possible explanations of this inequality.
