RESEARCH ACCOMPLISHMENTS

I am actively engaged in the development of new synthetic methods for heterocyclic compounds. I have worked on exploring synthetic applications of β -thiooxoketones and β -methylthio- α,β -unsaturated ketones for the synthesis of thiophene, isoxazole, thiazole and quinoline derivatives. I have used cascade protocol for the synthesis of thiazolidinones, oxazoles and 2-arylquinolines from alcohols in T3P-DMSO media. I have used xanthate esters for the synthesis of 5-alkoxy-4-(tosyl/ethoxycarbonyl)-1,3-thiazoles by base-induced cyclization with active methylene isocyanides and carbamothioates by the reaction with arylmethyl isocyanides/arylmethylamines. Besides, I have reported cyclization of activated methylene isocyanides with methyl *N(N),N'*-di(tri)substituted carbamimidothioates for the synthesis of *N*,1-aryl-4-tosyl/ethoxycarbonyl-1*H*-imidazol-5-amines. Further, I have synthesized new oligothiophenes and polythiophenes, which may be potential candidates for application in solar cells and organic light emitting diodes. Also, I am using density functional theory for calculations in materials science. Recently, I have been

exploring the synthetic applications of α -oxodithioesters for the synthesis of quinoxalines, benzoxazoles, quinazolinones, thiadiazoles, thiazoles, thioethers, etc.

Besides, in the area of green chemistry, I have employed choline chloride–urea ionic liquid for the synthesis of 4*H*-chromenes and pyranopyrazoles. I have reported solid phase regiospecific synthesis of 1,2- disubstituted 4-quinolones from enaminones. Furthermore, I have also reported the electrochemical sulfonylation of thiols with sulfonyl hydrazides, which is a metal- and oxidant-free protocol for the synthesis of thiosulfonates, dehydrogenative coupling of alcohols with hydrogen phosphoryl compounds by employing electricity and reductive coupling of aromatic aldehydes and ketones under electrochemical conditions.

Furthermore, I have synthesized biologically important molecules and explored them for antimicrobial, anti-inflammatory, anti-oxidant, anticancer, cholinesterase inhibition and platelet aggregation inhibition activities.

Recently, I have been involved in research on history of chemical science.
