

Vishwavidyanilaya Karyasoudha  
Crawford Hall, Mysuru- 570 005  
Dated: 25.09.2019

No.AC.2(S)/785/2019-20

**REVISED NOTIFICATION**

**Sub:** Revision of syllabus of M.Sc. Chemistry from the academic year 2019-20.

**Ref:** 1. Decision of Board of Studies in Chemistry (PG) meeting held on 28.12.2018.  
2. Decision of the Faculty of Science & Technology Meeting held on 01.04.2019.  
3. Decision of Academic Council meeting held on 07.06.2019.  
4. This office notification no. AC2(S)/785/2019-20 dated 12.07.2019.  
5. Letter dated 22.08.2019 received from the Chairman, BoS in Chemistry (PG), DoS in Chemistry, Manasagangotri, Mysore.

\*\*\*\*\*

The Board of Studies in Chemistry (PG) which met on 28-12-2018 has recommended to revise the syllabus of M.Sc. Chemistry from the Academic Year 2019-20.

The Faculty of Science and Technology and Academic Council meeting held on 01-04-2019 and 07.06.2019 respectively have approved the above said proposal and the same is already notified wide reference (4).

The BoS has once again made recommended to change the credits from 04 to 02 for III and IV semesters of M.Sc. Chemistry course

The revised syllabus of M.Sc. Chemistry course is annexed. The contents may be downloaded from the University Website i.e., [www.uni-mysore.ac.in](http://www.uni-mysore.ac.in).

Draft approved by the Registrar

**REVISED SYLLABUS  
FOR M.Sc. DEGREE  
PROGRAMME**

**2019-20**

## GENERAL REQUIREMENTS

### Scheme of Instructions

1. A Masters Degree programme is of 4 semesters-two years duration. A candidate can avail a maximum of 8 semesters – 4 years (in one stretch) to complete Masters Degree (including blank semesters, if any). Whenever a candidate opts for blank semesters, he/she has to study the prevailing courses offered by the department when he/she continues his/her studies.
2. A candidate has to earn a minimum of 76 credits, for successful completion of a Master Degree. The 76 credits shall be earned by the candidate by studying Hardcore, Soft Core and Open Elective.
3. **Minimum for Pass:** In case a candidate secures less than 30% in C<sub>1</sub> and C<sub>2</sub> put together, the candidate is said to have DROPPED the course, and such a candidate is not allowed to appear for C<sub>3</sub>.
4. In case a candidate secures less than 30% in C<sub>3</sub>, or secures more than 30% in C<sub>3</sub> but less than 50% in C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub> put together, the candidate is said to have not completed the course and he/she may either opt to DROP the course or to utilize PENDING option.
5. **Credits (Minimum) Matrix:** A candidate has to study 48 credits from hard Core, a minimum of 24 credits in Soft Core (sum total of 4 semesters) and 04 credits in Open Elective (II or III Semester) for the successful completion of the Masters Degree programme.
6. All other rules and regulations hold good which are governed by the University of Mysore from time to time.

### Definitions

1. In the Choice Based Credit System – Continuous Assessment Grading Pattern (CBCS-CAGP), programme means a course and a course means a paper.
2. HC: Hard Core; SC: Soft Core; OE: Open Elective

**GENERAL SCHEME WITH RESPECT TO ASSESSMENT OF CREDITS**

Semester	Hard Core		Soft Core			Open Elective
	Theory			Theory	Practicals	
I	I	3 + 0 + 0 = 3	A	2 + 0 + 0 = 2*	0 + 0 + 4 = 4 <sup>a</sup>	--
	O	3 + 0 + 0 = 3	I	2 + 0 + 0 = 2*	0 + 0 + 4 = 4 <sup>a</sup>	
	P	3 + 0 + 0 = 3	O	2 + 0 + 0 = 2*	0 + 0 + 4 = 4 <sup>a</sup>	
	A	3 + 0 + 0 = 3	P	2 + 0 + 0 = 2*	0 + 0 + 4 = 4 <sup>a</sup>	
II	I	3 + 0 + 0 = 3	A	2 + 0 + 0 = 2*	0 + 0 + 4 = 4 <sup>a</sup>	4 + 0 + 0 = 4 <sup>c</sup>
	O	3 + 0 + 0 = 3	I	2 + 0 + 0 = 2*	0 + 0 + 4 = 4 <sup>a</sup>	
	P	3 + 0 + 0 = 3	O	2 + 0 + 0 = 2*	0 + 0 + 4 = 4 <sup>a</sup>	
	G	3 + 0 + 0 = 3	P	2 + 0 + 0 = 2*	0 + 0 + 4 = 4 <sup>a</sup>	
III	I	3 + 0 + 0 = 3	A	2 + 0 + 0 = 2	0 + 0 + 2 = 2 <sup>ab</sup>	4 + 0 + 0 = 4 <sup>c</sup>
	O	3 + 0 + 0 = 3	I	2 + 0 + 0 = 2	0 + 0 + 2 = 2 <sup>ab</sup>	
	P	3 + 0 + 0 = 3	O	2 + 0 + 0 = 2	0 + 0 + 2 = 2 <sup>ab</sup>	
	G	3 + 0 + 0 = 3	P	2 + 0 + 0 = 2	0 + 0 + 2 = 2 <sup>ab</sup>	
IV	I	3 + 0 + 0 = 3	A	2 + 0 + 0 = 2	0 + 0 + 2 = 2 <sup>ab</sup>	--
	O	3 + 0 + 0 = 3	I	2 + 0 + 0 = 2	0 + 0 + 2 = 2 <sup>ab</sup>	
	P	3 + 0 + 0 = 3	O	2 + 0 + 0 = 2	0 + 0 + 2 = 2 <sup>ab</sup>	
	A	3 + 0 + 0 = 3	P	2 + 0 + 0 = 2	0 + 0 + 2 = 2 <sup>ab</sup>	
<b>Total Credits</b>	<b>48</b>		<b>24 (48)</b>			<b>04</b>

**Note:**

A – Analytical; I – Inorganic; O – Organic; P – Physical; G – Spectroscopy; e.g., (L + T + P): Theory + Tutorial + Practical.

\*Courses are common for both first and second semesters.

<sup>a</sup> 50% of the students will attend Analytical/Inorganic Practicals and remaining 50% students will attend Organic/Physical Practicals in I or III Semester and vice-versa during II or IV Semester.

<sup>b</sup> Practicals are only for Chemistry students which are compulsory papers.

<sup>c</sup> Courses are common for both II and III Semesters and the candidate can opt either in II or III semester

## SCHEME OF STUDY AND EXAMINATION

### FIRST SEMESTER

#### HARD CORE THEORY

Courses	Title	Contact Hours/ week	Credit	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (Hrs)	Marks
CHI HCT: 1.1	Concepts and Models of Inorganic Chemistry	3	3	100	15	15	03	70
CHO HCT: 1.2	Stereochemistry and Reaction Mechanism	3	3	100	15	15	03	70
CHP HCT: 1.3	Basic Physical Chemistry	3	3	100	15	15	03	70
CHA HCT: 1.4	Analytical data assessment and Titrimetric analysis	3	3	100	15	15	03	70

#### SOFT CORE THEORY

Courses	Title	Contact Hours/ week	Credit	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (Hrs)	Marks
CHA SCT: 1.1/2.1	Analytical separations	2	2	100	15	15	3	70
CHI SCT: 1.2/2.2	Chemistry of Selected Elements	2	2	100	15	15	3	70
CHO SCT: 1.3/2.3	Chemistry of Natural Products-I	2	2	100	15	15	3	70
CHP SCT: 1.4/2.4	Biophysical Chemistry	2	2	100	15	15	3	70

#### PRACTICALS

Courses	Title	Contact Hours/ week	Credit	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (Hrs)	Marks
CHA SCP: 1.1/2.1	Analytical Practicals - I	8	4	100	15	15	6	70
CHI SCP: 1.2/2.2	Inorganic Practicals - I	8	4	100	15	15	6	70
CHO SCP: 1.3/2.3	Organic Practicals - I	8	4	100	15	15	6	70
CHP SCP: 1.4/2.4	Physical Practicals - I	8	4	100	15	15	6	70

**Note:** 50% of students will attend Analytical and Inorganic Practicals and the remaining 50% of students will attend Organic and Physical Practicals in I Semester and vice-versa in II Semester.

**SECOND SEMESTER  
HARD CORE THEORY**

Courses	Title	Contact Hours/ week	Credit	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (Hrs)	Marks
CHI HCT: 2.1	Coordination Chemistry	3	3	100	15	15	03	70
CHO HCT: 2.2	Synthetic Organic Chemistry	3	3	100	15	15	03	70
CHP HCT: 2.3	Principles of Physical Chemistry	3	3	100	15	15	03	70
CHG HCT: 2.4	Molecular Symmetry and Spectroscopy	3	3	100	15	15	03	70

**NOTE:**

**Soft Core Theory:** All Courses are same as that described in I Semester

**Practicals:** Same as that of I Semester. Students who have studied Analytical and Inorganic or Organic and Physical Practicals in the I Semester will get interchanged during II Semester.

**OPEN ELECTIVE (for Non-Chemistry Students only)**

Courses	Title	Contact Hours/ week	Credit	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (Hrs)	Marks
CH OET: 2.1/3.1	General Chemistry	4	4	100	15	15	03	70

**NOTE:** The students can study this course either in II or III Semester

### THIRD SEMESTER

#### HARD CORE THEORY

Courses	Title	Contact Hours/week	Credit	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (Hrs)	Marks
CHI HCT: 3.1	Advanced Inorganic Chemistry	3	3	100	15	15	03	70
CHO HCT: 3.2	Organometallic and Photochemistry	3	3	100	15	15	03	70
CHP HCT: 3.3	Advanced Physical Chemistry	3	3	100	15	15	03	70
CHA HCT: 3.4	Chemical Spectroscopy	3	3	100	15	15	03	70

#### SOFT CORE THEORY

Courses	Title	Contact Hours/week	Credit	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (Hrs)	Marks
CHA SCT: 3.1	Electrochemical methods of chemical analysis	2	2	100	15	15	3	70
CHI SCT: 3.2	Frontiers in Inorganic Chemistry	2	2	100	15	15	3	70
CHO SCT: 3.3	Chemistry of Natural Products-II	2	2	100	15	15	3	70
CHP SCT: 3.4	Materials Chemistry	2	2	100	15	15	3	70

#### PRACTICALS

Courses	Title	Contact Hours/week	Credit	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (Hrs)	Marks
CHA SCP: 3.1/4.1	Analytical Practicals - II	4	2	100	15	15	6	70
CHI SCP: 3.2/4.2	Inorganic Practicals - II	4	2	100	15	15	6	70
CHO SCP: 3.3/4.3	Organic Practicals - II	4	2	100	15	15	6	70
CHP SCP: 3.4/4.4	Physical Practicals - II	4	2	100	15	15	6	70

**Note:** 50% of students will attend Analytical and Inorganic Practicals and the remaining 50% of students will attend Organic and Physical Practicals in I Semester and vice-versa in II Semester

#### OPEN ELECTIVE (for Non-Chemistry Students only)

The course is same as described in II Semester

## FOURTH SEMESTER

### HARD CORE THEORY

Courses	Title	Contact Hours/ week	Credit	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (Hrs)	Marks
CHI HCT: 4.1	Bioinorganic Chemistry	3	3	100	15	15	03	70
CHO HCT: 4.2	Heterocyclic and Bioorganic Chemistry	3	3	100	15	15	03	70
CHP HCT: 4.3	Nuclear, Radiation and Photochemistry	3	3	100	15	15	03	70
CHA HCT: 4.4	Optical, thermal and kinetic methods of analysis	3	3	100	15	15	03	70

### SOFT CORE THEORY

Courses	Title	Contact Hours/ week	Credit	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (Hrs)	Marks
CHA SCT: 4.1	Automated and methods of chemical analysis	2	2	100	15	15	3	70
CHI SCT: 4.2	Bioinorganic Photochemistry	2	2	100	15	15	3	70
CHO SCT: 4.3	Medicinal Chemistry	2	2	100	15	15	3	70
CHP SCT: 4.4	Quantum Chemistry and Biosensors	2	2	100	15	15	3	70

**NOTE:**

**Practicals:** Same as that of III Semester. Students who have studied Analytical and Inorganic or Organic and Physical Practicals in the III Semester will get interchanged during IV Semester

## SCHEME OF EXAMINATION FOR C<sub>1</sub>, C<sub>2</sub> AND C<sub>3</sub> COMPONENTS

### Preamble

In view of the CBCS syllabus, following is the model distribution of marks for C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub> Components. At a glance, the model includes HC, SC and OE courses for the assessment of marks.

The following is the scheme which will be followed for the assessment of marks for HC, SC and OE courses irrespective of the credits associated with each course. 30% of the marks will be assessed for the internals (C<sub>1</sub> and C<sub>2</sub>) and remaining 70% will be for the Semester End Examinations (C<sub>3</sub>). Each course carries 100 marks and hence 30 marks will be allotted to internals and remaining 70 marks will be for Semester end Examinations. Out of 30 marks for internals, 15 marks will be allotted to each C<sub>1</sub> and C<sub>2</sub> components.

Each course (HC/SC/OE) consists of three components namely C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub>. C<sub>1</sub> and C<sub>2</sub> are designated as Internal Assessment (IA) and C<sub>3</sub> as Semester End Examination. Each course (HC/SC/OE) carries **100 Marks** and hence the allotment of marks to C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub> Components will be 15, 15 and 70 marks, respectively. i.e.,

C <sub>1</sub> Component	15 Marks	Assessment Marks
C <sub>2</sub> Component	15 Marks	
C <sub>3</sub> Component	70 Marks	Semester End Examination
<b>Total</b>	<b>100 Marks</b>	

**The above Scheme will be followed for all the HC, SC and OE courses in all the four semesters.**

### 1. HARD CORE (03 CREDIT COURSES)

#### 1.1. Distribution of Marks for C<sub>1</sub> and C<sub>2</sub> Components:

Assessment Marks (C<sub>1</sub> + C<sub>2</sub>) consists of 30 marks. It will be divided into three parts viz., **Internal Test, Home Assignment and Seminar**. Internal tests will be conducted during the 8<sup>th</sup> week of the semester for C<sub>1</sub> and 16<sup>th</sup> week of the semester for C<sub>2</sub>. Home Assignment will be considered for C<sub>1</sub> Component and Seminar for C<sub>2</sub> Component only. Hence, a teacher from each unit of a course may be given one assignment (or in their personal interest one more may be given). Since each course has three units, the marks shall be divided equally. Allotment of marks for C<sub>1</sub> and C<sub>2</sub> is as follows: Out of 15 Marks for C<sub>1</sub>, Internal test will be conducted for 30 Marks (10 Marks from each unit and reduced to 10 Marks) and Home Assignment will be given for 05 Marks (Each Home Assignment from every unit will be assessed for 05 Marks and finally reduced to 05 Marks). Assessment Marks for C<sub>2</sub> will be distributed as follows: Internal test will be conducted for 30 Marks (10 Marks from each unit and reduced to 10 Marks) and Seminar will be assessed for 20 Marks and finally its Marks will be distributed to each theory HC course. i.e.,

	C <sub>1</sub>		C <sub>2</sub>
Internal Test	30 Marks (10+10+10) <b>Reduced to 10 Marks</b>	Internal Test	30 Marks (10+10+10) <b>Reduced to 10 Marks</b>
Home Assignment	15 Marks (05+05+05) <b>Reduced to 5 Marks</b>	Seminar	20 Marks (05+05+05+05) <b>5 Marks will be distributed to each HC course</b>
<b>Total</b>	<b>15 Marks</b>	<b>Total</b>	<b>15 Marks</b>

## 1.2. Distribution of Marks for C<sub>3</sub> Component (Semester End Examination)

The question paper is of 3 hr duration with the Max. Marks 70. The following question paper pattern will be followed for all the theory courses (HC/SC/OE). Question paper will have FIVE main questions. All the questions will cover all the units of the course with equal marks distribution. Q. No. 1 is of Medium/ Short Answer Type questions which will have nine questions and each question carries two marks. A student has to answer any seven questions. Q. No. 2 to 5 carries 14 marks each and a student has to answer all the four questions (*No Choice*). Each main question will have three sub-sections a, b, c. An examiner may set the questions like (4+4+6) or (4+5+5) or as his/her wish. However, sub-section 'c' will have an internal choice. i.e.,

### Model Question Paper Pattern

**Max. Duration: 3 Hr**

**Max. Marks: 70**

**Note:** Answer all the questions. Each question carries 14 marks.

**Q. No. 1:** Nine Medium/ Short Answer Type Questions and any seven should be answered. Each question carries TWO marks. (7 × 2 = 14)

**Q. No. 2 to 5:** All the four questions have to be answered (*No Choice*). Each question carries FOURTEEN marks. An examiner may set the questions like (4+4+6) or (4+5+5) or as his/her wish. However, sub-section c will have an internal choice. (*Two marks questions shall be avoided for 2 to 5*). (4 × 14 = 56)

- a)
- b)
- c) **OR** c)

## 2. SOFT CORE (02 CREDIT COURSES)

### 2.1. Distribution of Marks for C<sub>1</sub> and C<sub>2</sub> Components

Assessment Marks (C<sub>1</sub> + C<sub>2</sub>) consists of 30 marks. It will be divided into two parts viz., **Internal Test and Home Assignment**. Internal tests will be conducted during the 8<sup>th</sup> week of the semester for C<sub>1</sub> and 16<sup>th</sup> week of the semester for C<sub>2</sub>. As far as Home Assignment is concerned, the concerned teacher will assign one or two Home Assignments to each student. Since each course has two units, the marks will be divided equally. Allotment of marks for C<sub>1</sub> and C<sub>2</sub> is as follows: Out of 15 Marks for IA, Internal tests will be conducted for 20 marks and reduced to 10 marks, whereas Home Assignment is for 05 Marks. i.e.,

C <sub>1</sub>		C <sub>2</sub>	
Internal Test	20 Marks (10+10) <b>Reduced to 10</b>	Internal Test	20 Marks (10+10) <b>Reduced to 10</b>
Home Assignment	10 Marks (05+05) <b>Reduced to 05</b>	Home Assignment	10 Marks (05+05) <b>Reduced to 05</b>
<b>Total</b>	<b>15 Marks</b>	<b>Total</b>	<b>15 Marks</b>

### 2.2. Distribution of Marks for C<sub>3</sub> Component (Semester End Examination)

The above discussed pattern (1.2) holds good in this case also.

### 3. PRACTICALS

The following Scheme will be applicable for all the four semesters (SC for chemistry students only).

Each practical consists of three components namely C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub>. C<sub>1</sub> and C<sub>2</sub> are designated as Internal Assessment (IA) and C<sub>3</sub> as Semester End Examination. Each practical carries **100 Marks** and hence the allotment of marks to C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub> Components will be 15, 15 and 70 marks respectively. i.e.,

C <sub>1</sub> Component	15 Marks	Internal Assessment Marks
C <sub>2</sub> Component	15 Marks	
C <sub>3</sub> Component	70 Marks	Semester End Examination
<b>Total</b>	<b>100 Marks</b>	

#### 3.1. Distribution of Marks for C<sub>1</sub> and C<sub>2</sub> Components

IA consists of **15 Marks**; it will be divided into three parts viz., **Internal Test, Continuous Assessment and Record**. Continuous assessment refers to the daily assessment of each student based on his/her attendance, skill, results obtained etc. Thus, 05 marks are allotted for Continuous Assessment. Internal tests will be conducted for 05 Marks during the 8<sup>th</sup> week of the semester for C<sub>1</sub> and 16<sup>th</sup> week of the semester for C<sub>2</sub>. Finally, remaining 05 Marks will be for the record. i.e.,

C <sub>1</sub>		C <sub>2</sub>	
Internal Test	05 Marks	Internal Test	05 Marks
Continuous Assessment	05 Marks	Continuous Assessment	05 Marks
Record	05 Marks	Record	05 Marks
<b>Total</b>	<b>15 Marks</b>	<b>Total</b>	<b>15 Marks</b>

#### 3.2. Distribution of Marks for C<sub>3</sub> Component (Semester End Examination)

The end examination will be conducted for **70 Marks/course** with a maximum duration of 6 hours. Two experiments will be given to each student which carries 30 Marks each. Each student will be subjected to Viva-Voce Examination for which 10 Marks is allotted. i.e.,

Two Experiments	30+30 Marks
Viva-Voce	10 Marks
<b>Total</b>	<b>70 Marks</b>

**Note:** Examiners have to set at least one experiment from each part in the semester end

Examination (C<sub>3</sub>)

## FIRST SEMESTER

### CHI HCT: 1.1. CONCEPT AND MODELS OF INORGANIC CHEMISTRY

#### UNIT-I

[16 HOURS]

**Chemical Periodicity:** Review of periodic properties

**Structures and energetics of ionic crystals:** Introduction, MX (NaCl, CsCl, ZnS) and MX<sub>2</sub> (fluorite, rutile, β-cristobalite, cadmium chloride and cadmium iodide) types. The perovskite and spinel structures. Thermodynamics of ionic crystal formation. Hydration energy and solubility of ionic compounds, Lattice energy, Born-Haber cycle, Born-Lande equation. The Kapustinskii's equation, Consequences of lattice enthalpies. Applications of lattice energetics. Ionic radii, factors affecting the ionic radii, radius ratio rules.

**Structures and energetics of inorganic molecules:** Introduction, Bent's rule, Energetics of hybridization. VSEPR model for explaining structure of molecules including fluxional molecule. M.O. treatment of homo-nuclear and heteronuclear diatomic molecules. M.O. treatment involving delocalized π-bonding (CO<sub>3</sub><sup>2-</sup>, NO<sub>3</sub><sup>-</sup>, NO<sub>2</sub><sup>-</sup>, CO<sub>2</sub> and N<sub>3</sub><sup>-</sup>), M.O. correlation diagrams (Walsh) for triatomic molecules.

#### UNIT-II

[16 HOURS]

**Modern concept of acids and bases:** Lux-Flood and Usanovich concepts, solvent system and leveling effect. Hard-Soft Acids and Bases, Classification and Theoretical backgrounds.

**Non-aqueous solvents:** Classification of solvents, Properties of solvents (dielectric constant, donor and acceptor properties) protic solvents (anhydrous H<sub>2</sub>SO<sub>4</sub>, HF and glacial acetic acid) aprotic solvents (liquid SO<sub>2</sub>, BrF<sub>3</sub> and N<sub>2</sub>O<sub>4</sub>). Solutions of metals in liquid ammonia, hydrated electron. Super acids and super bases. Heterogeneous acid-base reactions.

**Ionic liquids:** Molten salt solvent systems, Ionic liquids at ambient temperature, Reactions in and applications of molten salt/ionic liquid media.

**Supercritical fluids:** Properties of supercritical fluids and their uses as solvents. Supercritical fluids as media for inorganic chemistry

#### UNIT-III

[16 HOURS]

**Lanthanoid chemistry:** General trends, Electronic, optical and magnetic properties. Abundance and extraction, **General principles:** conventional, solvent extraction and ion-exchange methods. Separation from monazite. Chemistry of principal oxidation states (II, III and IV). Stability of tetrahalides, dihalides and aqua ions of simple lanthanide compounds. Redox potentials. **Uses:** lanthanides as shift reagents, lanthanides as probes in biological systems. High temperature super conductors.

**Actinoid chemistry:** General trends and electronic spectra. Occurrence and preparation of elements, **Isolation of the elements:** thorium and uranium, enrichment of uranium for nuclear fuel, uranium hydrides, oxides and chlorides. Chemical reactivity and trend. Chemistry of trans-uranium elements.

**Supramolecular Chemistry:** Introduction, selectivity and Supramolecular Interactions.

## CHO HCT: 1.2. STEREOCHEMISTRY AND REACTION MECHANISM

### UNIT-I

[16 HOURS]

**Stereoisomerism:** Projection formulae [flywedge, Fischer, Newman and sawhorse], enantiomers, diastereoisomers, mesomers, racemic mixture and their resolution, configurational notations of simple molecules, DL and RS configurational notations.

**Optical isomerism:** Conditions for optical isomerism: Elements of symmetry-plane of symmetry, centre of symmetry, alternating axis of symmetry (rotation-reflection symmetry). Optical isomerism due to chiral centers and molecular dissymmetry, allenes and biphenyls, criteria for optical purity.

**Geometrical isomerism:** Due to C=C, C=N and N=N bonds, *E*, *Z* conventions, determination of configuration by physical and chemical methods. Geometrical isomerism in cyclic systems. **Conformational analysis:** Elementary account of conformational equilibria of ethane, butane and cyclohexane. Conformation of cyclic compounds such as cyclopentane, cyclohexane, cyclohexanones and decalins. Conformational analysis of 1,2-, 1,3- and 1,4- disubstituted cyclohexane derivatives and *D*-Glucose, Effect of conformation on the course and rate of reactions.

**Stereoselectivity:** Meaning and examples of stereospecific reactions, stereoselective reactions, diastereoselective reactions, regioselective, regiospecific reactions, enantioselective reactions and enantiospecific reactions.

### UNIT-II

[16 HOURS]

**Basics of organic reactions:** Meaning and importance of reaction mechanism, classification and examples for each class.

**Bonding in organic systems:** Theories of bonding-molecular orbital approaches. Huckel molecular orbital theory and its application to simple  $\pi$ -systems: ethylene, allyl,

cyclopropyl, butadienyl, cyclopentadienyl, pentadienyl, hexatrienyl, cyclohexatrienyl, heptatrienyl, cycloheptatrienyl systems. Calculation of the total  $\pi$ -energy, and M.O. coefficients of the systems.

**Aromaticity:** Concept of aromaticity, Huckel's rule, Polygon rule, annulenes, heteroannulenes and polycyclic systems.

**Structure and reactivity:** Brief discussion on effects of hydrogen bonding, resonance, inductive and hyperconjugation on strengths of acids and bases.

**Methods of determining organic reaction mechanism:** Thermodynamic and kinetic requirements for reactions, kinetic and thermodynamic control. Identification of products. Determination of reaction intermediates, isotope labeling and effects of cross over experiments. Kinetic and stereochemical evidence, solvent effect. Formation, structure, stability, detection and reactions of carbocations (classical and non-classical), carbanions, free radicals, carbenes, nitrenes, arynes and ylides (Sulphur, nitrogen and phosphorous).

### UNIT-III

[16 HOURS]

**Aliphatic Nucleophilic Substitution reactions:** Kinetics, mechanism and stereochemical factor affecting the rate of  $S_N1$ ,  $S_N2$ ,  $S_{RN}1$ ,  $S_Ni$ ,  $S_N1'$ ,  $S_N2'$ ,  $S_N1i$  and  $S_{RN}1'$  reactions, Neighbouring group participation.

**Electrophilic substitution reactions:** Kinetics, mechanism and stereochemical factor affecting the rate of  $S_E1$  &  $S_E2$

**Aromatic electrophilic substitution reactions:** Mechanism of nitration, halogenation, sulphonation, Friedel-Crafts alkylation and acylation, Mannich reaction, chloromethylation, Vilsmeier Haack reaction, Diazonium coupling, Gattermann-Koch reaction, Mercuration reaction.

**Aromatic nucleophilic substitution reactions:**  $S_N1$ ,  $S_N2$  and benzyne mechanism, Bucherer reaction, von Richter reaction.

**Mechanism of Addition reactions:** Addition to C=C multiple bonds involving electrophiles, nucleophiles. Markownikoff's rule and anti-Markownikoff's rule.

**Additions to carbonyl compounds:** Addition of water, alcohol, bisulphate, HCN and amino compounds. Hydrolysis of esters.

**Elimination reactions:** Mechanism and stereochemistry of eliminations -  $E_1$ ,  $E_2$ ,  $E_{1cB}$ . *cis* elimination, Hofmann and Saytzeff eliminations, competition between elimination and substitution reactions, decarboxylation reactions. Chugaev reaction.

## CHP HCT: 1.3. BASIC PHYSICAL CHEMISTRY

### UNIT-I

[16 HOURS]

**Chemical Thermodynamics: Entropy:** Physical significance, entropy changes in an ideal gas. Variation of entropy with temperature, pressure and volume. Entropy changes in reversible and irreversible processes.

**Free energy:** Helmholtz and Gibbs free energies, Gibbs-Helmholtz equation and its applications, Maxwell's relations and its applications. Nernst heat theorem: its consequences and applications. Third law of thermodynamics: statements, applications and comparison with Nernst heat theorem.

**Partial molar properties:** Physical significance, determination of partial molar volumes by intercept method and from density measurements. Chemical potential and its significance. Variation of chemical potential with temperature and pressure. Formulation of the Gibbs – Duhem equation. Derivation of Duhem-Margules equation.

**Fugacity:** Relation between fugacity and pressure, variation of fugacity with temperature and pressure. Determination of fugacity of gases.

**Activity and activity coefficient:** Variation of activity with temperature and pressure. Determination of activity coefficient by vapour pressure, depression in freezing point, solubility measurements and by electrical methods.

**Thermodynamics of dilute solutions:** Raoult's law, Henry's law. Ideal and non-ideal solutions.

### UNIT-II

[16 HOURS]

**Chemical Kinetics:** Complex reactions: Kinetics of parallel, consecutive and reversible reactions. Chain reactions: Branched chain reactions, general rate expression, Auto catalytic reactions (Hydrogen-Oxygen reaction), oscillatory reactions and explosion limits.

**Theories of reaction rates:** Collision theory and its limitations, Activated complex theory (postulates -derivation) and its applications to reactions in solution. Energy of activation, other activation parameters - determinations and their significance. Lindemann theory, Hinshelwood's theory of unimolecular reactions.

**Potential energy surfaces:** Features and construction, theoretical calculations of  $E_a$ .

**Reactions in solution:** Ionic reactions - salt effects, effect of dielectric constant (single and double sphere models). Effect of pressure, volume and entropy change on the rates of reactions. Cage effect with an example.

**Fast reactions-** Introduction, study of fast reactions by continuous and stopped flow techniques, relaxation methods (T-jump and P-jump methods), flash photolysis, pulse and shock tube methods.

### UNIT-III

[16 HOURS]

**Electrochemistry of solutions:** Factor effecting electrolytic conductance. Debye-Huckel theory - Concept of ionic atmosphere. Debye-Huckel-Onsager equation of conductivity and its validity. Debye-Huckel limiting law (DHL), its modification for appreciable concentrations. A brief survey of Helmholtz-Perrin, Guoy-Chapman and Stern electrical double layer (no derivation). Transference number: True and apparent

transference numbers, Abnormal transference numbers, effect of temperature on transference numbers. Liquid junction potential-determination and minimization.

**Energetics of cell reactions:** Effect of temperature, pressure and concentration on energetics of cell reactions (calculation of  $\Delta G$ ,  $\Delta H$  and  $\Delta S$ ).

**Irreversible electrode process:** Introduction, reversible and irreversible electrodes, reversible and irreversible cells. Polarization, over voltage - concentration over voltage, activation over voltage and ohmic over voltage. Experimental determination of over voltage. Equations for concentration over potential, stationary and non-stationary surface. Butler-Volmer equation, Tafel equation. Hydrogen oxygen over voltage. Effect of temperature, current density and pH on over voltage. Polarography- Half wave potential, application in qualitative and quantitative analysis.

## CHA HCT: 1.4. ANALYTICAL DATA ASSESSMENT AND TITRIMETRIC ANALYSIS

### UNIT-I

[16 HOURS]

**Analytical chemistry:** Its functions and applications; analytical problems and procedures, analytical techniques and methods, method validation.

**Calibration and standards:** Calibration, chemical standard and reference material.

**Quality in analytical laboratories:** quality control, quality assurance and accreditation system.

**Errors in analytical measurements:** measurement errors, absolute and relative errors, determinate and indeterminate errors and accumulated errors-sources, effects on results and control.

**Assessment of accuracy and precision:** Accuracy and precision, standard deviation, relative standard deviation, pooled standard deviation, variance, overall precision, and confidence interval.

**Significance testing:** Significance tests- Outlier, Q-test, F-test, t-test, and analysis of variance (ANOVA). Significant numbers.

**Calibration and linear regression:** Calibration, linear regression, standard addition, internal standardisation, internal normalization, external standardisation.

**Figures of merit of Analytical methods:** sensitivity and detection limit, linear dynamic range.

**Quality control and chemometrics:** Control charts, collaborative testing and multivariate statistics.

## UNIT-II

[16 HOURS]

**Obtaining and preparing samples for analysis:** Importance of sampling, designing a sample

plan-random, judgement, systematic-judgement, stratified and convenience sampling. Type of

sample to collect - grab and composite samples. Insitu sampling. Size of sample and number of

samples. Implementing the sampling plan - solutions, gases and solids. Bringing solid samples

into solution - digestion and decomposing.

**Titrimetric analysis:** An overview of titrimetry. Principles of titrimetric analysis. Titration curves. Titrations based on acid-base reactions - titration curves for strong acid and strong base, weak acid and strong base and weak base and strong acid titrations. Selecting and evaluating the end point. Finding the end point by visual indicators, monitoring pH and temperature.

Quantitative applications - selecting and standardizing a titrant, inorganic analysis - alkalinity, acidity and free CO<sub>2</sub> in water and waste waters, nitrogen, sulphur ammonium salts, nitrates and nitrites, carbonates and bicarbonates. Organic analysis - functional groups like carboxylic acid, sulphonic acid, amine, ester, hydroxyl, carbonyl. Air pollutants like SO<sub>2</sub>. Quantitative calculations. Characterization applications - equivalent weights and equilibrium constants.

**Acid-base titrations in non-aqueous media:** Role of solvent in acid-base titrations, solvent systems, differentiating ability of a solvent, some selected solvents, titrants and standards, titration curves, effect of water, determining the equivalence point, typical applications - determination of carboxylic acids, phenols and amines.

## UNIT-III

[16 HOURS]

**Precipitation titrations:** Titration curves, feasibility of precipitation titrations, factors affecting shape - titrant and analyte concentration, completeness of the reaction, titrants and standards, indicators for precipitation titrations involving silver nitrate, Volhard, Mohr and Fajan's methods, typical applications.

**Complexometric titrations:** Complex formation reactions, stability of complexes, stepwise formation constants, chelating agents, EDTA - acidic properties, complexes with metal ions, equilibrium calculations involving EDTA, conditional formation constants, derivation of EDTA titration curves, effect of other complexing agents, factors affecting the shape of titration curves - completeness of reaction, indicators for EDTA titrations - theory of common indicators, titration methods employing EDTA - direct, back and displacement titrations, indirect determinations, titration of mixtures.

**Redox titrations:** Balancing redox equations, calculation of the equilibrium constant of redox reactions, calculating titration curves, detection of end point, visual indicators and potentiometric end point detection. Quantitative applications-adjusting the analyte's oxidation state, selecting and standardizing a titrant. Inorganic analysis-chlorine residuals, dissolved oxygen in water, water in non-aqueous solvents. Organic analysis-chemical oxygen demand (COD) in natural and waste waters, titrations of mercaptans and ascorbic acid with  $I_3^-$  and titration of organic compounds using periodate.

## CHA SCP: 1.1/2.1. ANALYTICAL CHEMISTRY PRACTICALS-I

[128 HOURS]

### PART-A

1. Determination of total acidity of vinegar and wines by acid-base titration.
2. Determination of purity of a commercial boric acid sample, and  $Na_2CO_3$  content of washing soda.
3. Analysis of chromate-dichromate mixture by acid-base titration.
4. Determination of replaceable hydrogen and relative molecular mass of a weak organic acid by titration with NaOH.
5. Determination of ephedrine and aspirin in their tablet preparations by residual acid-base titrimetry.
6. Determination of purity of aniline and assay of chlorpromazine tablets by non-aqueous acid-base titration.
7. Periodate determination of ethylene glycol and glycerol (Malprade reaction).
8. Determination of carbonate and bicarbonate in a mixture by pH-metric titration and comparison with visual acid-base titration.
9. Determination of purity of a commercial sample of mercuric oxide by acid-base titration.
10. Determination of benzoic acid in food products by titration with methanolic KOH in chloroform medium using thymol blue as indicator.
11. Determination of the pH of hair shampoos and pH determination of an unknown soda ash.

12. Analysis of water/waste water for acidity by visual, pH metric and conductometric titrations.
13. Analysis of water/waste water for alkalinity by visual, pH metric and conductometric titrations.
14. Determination of carbonate and hydroxide-analysis of a commercial washing soda by visual and pH-titrimetry.
15. Determination of ammonia in house-hold cleaners by visual and conductometric titration.
16. Potentiometric determination of the equivalent weight and  $K_a$  for a pure unknown weak acid.
17. Spectrophotometric determination of creatinine and phosphorus in urine.
18. Flame emission spectrometric determination of sodium and potassium in river/lake water.
19. Spectrophotometric determination of  $pK_a$  of an acid-base indicator.

#### **PART-B**

1. Determination of percentage of chloride in a sample by precipitation titration-Mohr, Volhard and Fajan's methods.
2. Determination of silver in an alloy and  $Na_2CO_3$  in soda ash by Volhard method.
3. Mercurimetric determination of blood or urinary chloride.
4. Determination of total hardness, calcium and magnesium hardness and carbonate and bicarbonate hardness of water by complexation titration using EDTA.
5. Determination of calcium in calcium gluconate/calcium carbonate tablets/injections and of calcium in milk powder by EDTA titration.
6. Analysis of commercial hypochlorite and peroxide solution by iodometric titration.
7. Determination of copper in an ore/an alloy by iodometry and tin in stibnite by iodimetry.
8. Determination of ascorbic acid in vitamin C tablets by titrations with  $KBrO_3$  and of vitamin C in citrus fruit juice by iodimetric titration.
9. Determination of iron in razor blade by visual and potentiometric titration using sodium metavanadate.
10. Determination of iron in pharmaceuticals by visual and potentiometric titration using cerium(IV) sulphate.
11. Determination of nickel in steel by synergic extraction and boron in river water/sewage using ferroin.
12. Determination of total cation concentration of tap water by ion-exchange chromatography.
13. Determination of magnesium in milk of magnesium tablets by ion-exchange chromatography.
14. Cation exchange chromatographic separation of cadmium and zinc and their estimation by EDTA titration.
15. Gas chromatographic determination of ethanol in beverages.
16. Determination of aspirin, phenacetin and caffeine in a mixture by HPLC.
17. Solvent extraction of zinc and its spectrophotometric determination.
18. Anion exchange chromatographic separation of zinc and magnesium followed by EDTA titration of the metals.
19. Separation and determination of chloride and bromide on an anion exchanger.
20. Thin layer chromatographic separation of amino acids.

### CHI SCP: 1.2/2.2. INORGANIC CHEMISTRY PRACTICALS – I

[128 HOURS]

#### PART – A

1. Determination of iron in haematite using cerium (IV) solution (0.02M) as the titrant, and gravimetric estimation of insoluble residue.
2. Estimation of calcium and magnesium carbonates in dolomite using EDTA titration, and gravimetric analysis of insoluble residue.
3. Determination of manganese dioxide in pyrolusite using permanganate titration.
4. Quantitative analysis of copper-nickel in alloy/mixture:
  - i. Copper volumetrically using  $\text{KIO}_3$ .
  - ii. Nickel gravimetrically using DMG
5. Determination of lead and tin in a mixture: Analysis of solder using EDTA titration.
6. Quantitative analysis of chloride and iodide in a mixture:
  - i. Iodide volumetrically using  $\text{KIO}_3$
  - ii. Total halide gravimetrically
7. Gravimetric analysis of molybdenum with 8-hydroxyquinoline.
8. Quantitative analysis of copper(II) and iron(II) in a mixture:
  - i. Copper gravimetrically as  $\text{CuSCN}$  and
  - ii. Iron volumetrically using cerium(IV) solution
9. Spectrophotometric determinations of:
  - a. Titanium using hydrogen peroxide
  - b. Chromium using diphenyl carbazide in industrial effluents
  - c. Iron using thiocyanate/1,10-phenanthroline method in commercial samples
  - d. Nickel using dimethylglyoxime in steel solution
10. Micro-titrimetric estimation of :
  - a) Iron using cerium(IV)
  - b) Calcium and magnesium using EDTA
11. Quantitative estimation of copper (II), calcium (II) and chloride in a mixture.

12. Circular paper chromatographic separation of: (Demonstration)
  - a. Iron and nickel
  - b. Copper and nickel

### PART - B

Semimicro qualitative analysis of inorganic mixtures containing **TWO** anions and **TWO** cations (excluding sodium, potassium and ammonium cations) and **ONE** of the following less common cations: W, Mo, Ce, Ti, Zr, V and Li.

### References

1. Vogel's Text Book of Quantitative Chemical Analysis – 5<sup>th</sup> edition, J. Basset, R.C. Denney, G.H. Jeffery and J. Mendhom.

7. Quantitative Chemical Analysis by Daniel C. Harris, 7<sup>th</sup> edition, (2006).

### CHO SCP: 1.3/2.3. ORGANIC CHEMISTRY PRACTICALS-I

[128 HOURS]

#### PART-A

#### Multistep synthesis

1. Preparation *p*-bromoaniline from acetanilide.
2. Preparation of *n*-butyl bromide from *n*-butyl alcohol.
3. Oxidation of cyclohexanol to adipic acid.
4. Esterification: Preparation of benzocaine from *p*-nitrotoluene.
5. Diazotization (Sandmeyer's reaction): Preparation of *p*-chlorobenzoic acid from *p*-toluidine.
6. Preparation benzilic acid from benzoin.
7. Preparation of *o*-hydroxy benzophenone from phenyl benzoate *via* Fries rearrangement.
8. Preparation of benzanilide from benzophenone oxime *via* Beckmann rearrangement.
9. Preparation of benzoic acid from benzaldehyde (Cannizzaro Reaction).
10. Preparation of 2,4-dinitrophenylhydrazine from 2,4-dinitrochlorobenzene.
11. Preparation of *m*-nitrobenzoic acid from methylbenzoate.
12. Preparation of chalcone.

#### PART-B

**Qualitative analysis:** Separation of binary mixtures, identification of functional groups and preparation of suitable solid derivatives.

### References

1. Vogel' text book of practical organic chemistry, V edition, B. S. Furniss, A. J. Hannaford, P. W. G. Smith, A. R. Tatehell.

4. Experiments in Organic Chemistry, Louis F. Fieser.
5. Laboratory manual of Organic Chemistry by B. B. Dey and M. V. Sitaraman.
6. Practical Organic Chemistry by Mann F. G. and Saunders.

### CHP SCP: 1.4/2.4. PHYSICAL CHEMISTRY PRACTICALS - I

[128 HOURS]

#### PART - A

1. Study of kinetics of hydrolysis of methyl acetate in presence of two different concentrations of HCl/H<sub>2</sub>SO<sub>4</sub> and report the relative catalytic strength.
2. Study of kinetics of reaction between K<sub>2</sub>S<sub>2</sub>O<sub>8</sub> and KI, first order, determination of rate constants at two different temperatures and  $E_a$ .
3. To study the kinetics of saponification of ethyl acetate by conductivity method at two different concentrations of NaOH and report the relative catalytic strength.
4. Determination of partial molar volume of salt-water system (NaCl-H<sub>2</sub>O/KCl-H<sub>2</sub>O/KNO<sub>3</sub>-H<sub>2</sub>O) systems.
5. To study the kinetics of reaction between acetone and iodine - determination of order of reaction with respect to iodine and acetone.
6. Study the kinetics of decomposition of diacetone alcohol by NaOH, determine the catalytic coefficient of the reaction and comparison of strength of alkali.
7. Determination of energy of activation for the bromide-bromate reaction.
8. Kinetics of reaction between sodium formate and iodine and determination of energy of activation.
9. Determination of heat of solution of organic acid (benzoic acid/salicylic acid) by variable temperature method (graphical method).
10. Determination of degree of association of benzoic acid in benzene by distribution method.
11. To determine the eutectic point of a two component system (Naphthalene-*m*-dinitrobenzene system).
12. Analysis of a binary mixture (Glycerol & Water) by measurement of refractive index.
13. Determination of the molecular weight of a polymer material by viscosity measurements (cellulose acetate/methyl acrylate).

#### PART - B

1. Conductometric titration of a mixture of HCl and CH<sub>3</sub>COOH against NaOH.
2. Conductometric titration of sodium sulphate against barium chloride.
3. pH titration of (a) HCl against NaOH (b) Copper sulphate against NaOH and (c) CH<sub>3</sub>COOH/HCOOH against NaOH - determination of  $K_a$ .
4. Determination of equivalent conductance of weak electrolyte (CH<sub>3</sub>COOH) at infinite dilution following Kohlrausch law.
5. Determination of dissociation constant and mean ionic activity coefficient of weak acids (CH<sub>3</sub>COOH/HCOOH/ClCH<sub>2</sub>COOH) by conductivity method.
6. Potentiometric titration of KI vs KMnO<sub>4</sub> solution.
7. Determination of dissociation constant of a weak acid (CH<sub>3</sub>COOH/HCOOH/ClCH<sub>2</sub>COOH) by potentiometric method.
8. Potentiometric titration of a mixture of halides (KCl+KI/KCl+KBr/KBr+KI) against AgNO<sub>3</sub>.
9. To obtain the absorption spectra of coloured complexes, verification of Beer's law and estimation of metal ions in solution using a spectrophotometer.

10. Potentiometric titration of  $K_2Cr_2O_7$  against FAS determination of redox potential and concentration of  $Fe^{2+}$  ions.
11. Conductometric titration of oxalic acid against NaOH and  $NH_4OH$ .
12. Coulometric titration  $I_2$  vs  $Na_2S_2O_3$ .
13. Determination of acidic and basic dissociation constant and isoelectric point of an amino acid by pH metric method.
14. Kinetics of photodegradation of indigocarmine (IC) using  $ZnO/TiO_2$  as photocatalyst and study the effect of  $[ZnO/TiO_2]$  and  $[IC]$  on the rate of photodegradation.

## SOFT CORE PAPERS

### CHA SCT: 1.1/2.1. ANALYTICAL SEPARATIONS

#### UNIT-I

[16 HOURS]

**Principles of chromatography-** Chromatographic separations and classification of principal chromatographic separations. Chromatographic mechanisms-sorption isotherms; adsorption systems-stationary and mobile phases, partition systems-stationary and mobile phases. Characterization of solutes-distribution ratio, retention factor, retention time and retardation factor.

**Sorption processes-** adsorption, partition, ion- exchange and size exclusion.

**Chromatographic performance-** Efficiency and resolution. Peak asymmetry- kinetic and temperature effects. Isolation of separated components.

Quantitative and qualitative analyses.

**Thin layer chromatography (TLC)** - Principles and procedures, stationary and mobile phases, solute- detection, alternative TLC procedures and applications of TLC.

**Gas chromatography (GC)** - Principles and types. Mobile phases, Sample injections, columns and stationary phases. Temperature control and solute detection; thermal conductivity detector (TCD), flame ionization detector (FID), nitrogen-phosphorus detector (NPD) and electron capture detector (ECD). Instrument control and data processing. GC-procedures- temperature programming and special procedures used in GC. Quantitative and qualitative analyses.

**High performance liquid chromatography(HPLC):** Principles, mobile phases, solvent delivery systems, sample injection system, column and stationary phases. Solute

detection -UV-visible, fluorescence, refractive index and electrochemical detectors. Instrument control and data processing. Modes of HPLC. Optimisation of separations, qualitative and quantitative analyses.

## UNIT-II

[16 HOURS]

**Ion-exchange chromatography (IEC):** Principles, apparatus and instrumentation, and applications.

**Size-exclusion chromatography (SEC):** Principles, apparatus and instrumentation, and applications.

**Affinity chromatography (AFC):** Principles, methodology and applications.

**Supercritical fluid chromatography (SFC):** Properties of supercritical fluids, instrumentation and operating variables, comparison of SFC with other chromatographic techniques, applications.

**Supercritical fluid extraction (SFE):** Advantages, instrumentation, choice of supercritical fluids, off-line and on-line extraction, applications.

**Electrophoresis (EP) and electrochromatography(EC):** Principles- high performance capillary electrophoresis and capillary electrochromatography, running buffers, supporting medium, sample injection, solutes- detection, instrument control and data processing. Modes of EP and EC- capillary zone electrophoresis (CZE), micellar electrokinetic chromatography (MEKC), capillary gel electrophoresis (CZE), capillary isoelectric focusing (CIEF). Capillary electrochromatography (CEC), features, basis of separations. Qualitative analysis by CE and CEC and applications.

**Solvent and solid phase extraction:** Extraction techniques, extraction efficiency and selectivity. Solvent extraction (SE) - Extraction of organic acids and bases, extraction of metals. Methods of extraction and applications. Solvent phase sorbents, solid phase extraction (SPE) formats. Automated solid phase extraction. Solid phase micro extraction (SPME). Applications of SPE and SPME.

## CHI SCT: 1.2/2.2. CHEMISTRY OF SELECTED ELEMENTS

### UNIT-I

[16 HOURS]

**Compounds of hydrogen:** The hydrogen and hydride ions, Dihydrogen and hydrogen bonding. Classes of binary hydrides: Molecular hydrides, saline hydrides and metallic hydrides.

**The Group 1 elements:** Occurrence, extraction and uses. Simple compounds: Hydrides, halides, oxides, hydroxides, oxoacids, nitrides, solubility and hydration and solutions in liquid ammonia. Coordination and organometallic compounds. Applications.

**The Group 2 elements:** Occurrence, extraction and uses. General properties. Halides, hydrides and salts of oxo acids. Complex ion in aqueous solution and complexes with amido and alkoxy ligands.

**The Group 15 elements:** Introduction, oxides and oxoacids of nitrogen and phosphorus.

### UNIT-II

[16 HOURS]

**The Group 17 elements:** Occurrence, recovery and uses. Trends in properties and pseudohalogens. **Interhalogens:** Physical properties and structures, chemical properties, cationic interhalogens. **Compounds with oxygen:** Halogen oxides, oxoacids and oxoanions. Trends in rates of redox reactions and redox properties of individual oxidation states.

**Chemistry of astatine.**

**The Group 18 elements:** Occurrence, recovery and uses. Synthesis and structure of xenon fluorides, Reaction of xenon fluorides, xenon-oxygen compounds, Organoxenon compounds, other compounds of noble gases.

**M-M bonds:** Multiple metal-metal bonds.

**Cluster compounds:** carbonyl and carbide clusters.

## CHO SCT: 1.3/2.3. CHEMISTRY OF NATURAL PRODUCTS-I

### UNIT-I

[16 HOURS]

**Lipids:** Nomenclature, classification, purification, structure and synthesis of fatty acids, phospholipids, sphingolipids. Biological importance of lipids (Lecithin, sphingolipids, oils and fats).

**Prostaglandins:** Introduction, classification and biological importance of PG's. Constitution of PGE1. Synthesis of PGE & F series.

**Terpenoids:** Introduction, classification and general methods of structural elucidation. Chemistry of pinene, camphor, caryophyllene, santonin. Biosynthesis of terpenoids.

### UNIT-II

[16 HOURS]

**Porphyrins:** Introduction, structure and biological functions of haemin. Vitamin B12: structure and as coenzyme in molecular rearrangement reactions; Chlorophyll: structure and biological importance.

**Flavonoids and Isoflavonoids:** Occurrence, nomenclature and general methods of structure determination. Isolation and synthesis of Apigenin, Luteolin, Kaempferol, Quercetin, wedelolactone, Butein, Daidzein. Biosynthesis of flavonoids and isoflavonoids: Acetate Pathway and Shikimic acid Pathway. Biological importance of flavonoids and isoflavonoids

### References

4. Natural products: Their chemistry and biological significance, J. Mann, R. S. Davidson, J. B. Banthorpe and J. B. Harborne.
5. Synthetic drugs, Gurdeep R. Chatwal.
6. Heterocyclic chemistry by Achison.
7. Heterocyclic chemistry by Smith and Joule.
8. Heterocyclic chemistry by Pacquete.

## CHP SCT: 1.4/2.4. BIOPHYSICAL CHEMISTRY

### UNIT-I

[16 HOURS]

**Biophysical Chemistry:** Electrophoresis - Principles of free electrophoresis, zone electrophoresis, gel electrophoresis and its applications in qualitative and quantitative study of proteins. Determination of isoelectric point of a protein. Electro-osmosis and streaming potential and its biological significance. Biological significance of Donnan membrane phenomenon. Micelles and its involvement during digestion and absorption of dietary lipids. Diffusion of solutes across bio-membranes and its application in the mechanism of respiratory exchange. "Salting In" and "Salting Out" of proteins. Osmotic behaviour of cells and osmo-regulation and its application in the evolution of excretory systems of organisms. Effect of temperature and pH on the viscosity of bio-molecules (albumin solution). Significance of viscosity in biological systems - mechanism of muscle

contraction, polymerization of DNA and nature of blood flow through different vessels. Effect of temperature, solute concentration (amino acids) on surface tension. Biological significance of surface tension - stability of Alveoli in lungs, interfacial tension in living cells (Danielli and Davson model). Application of sedimentation velocity and sedimentation equilibrium method for molecular weight determination of proteins.

## UNIT-II

[16 HOURS]

**Pharmacokinetics:** Introduction, biopharmaceutics, pharmacokinetics, clinical pharmacokinetics, pharmacodynamics, toxicokinetics and clinical toxicology. Measurement of drug concentration in blood, plasma or serum. Plasma level-time curve, significance of measuring plasma drug concentrations.

**One compartment open model:** Intravenous route of administration of drug, elimination rate constant, apparent volume of distribution and significance. Calculation of elimination rate constant from urinary excretion data, clinical application.

**Two compartment model:** Plasma level-time curve, relationship between tissue and plasma drug concentrations, Apparent volumes of distribution. Drug clearance, clinical example. Plasma level-time curve for a three compartment open model.

Drug absorption: Factors affecting the rate of drug absorption - nature of the cell membrane, Route of drug administration - Oral drug absorption, Intravenous infusion and intravenous solutions, Effect of food on gastrointestinal drug absorption rate.

## SECOND SEMESTER

### CHI HCT: 2.1. COORDINATION CHEMISTRY

#### UNIT-I

[16 HOURS]

**Preparation of coordination compounds:** Introduction, Preparative methods- simple addition reactions, substitution reactions, oxidation-reduction reactions, thermal dissociation reactions. Geometries of metal complexes of higher coordination numbers (2-12).

**Stability of coordination compounds:** Introduction, trends in stepwise stability constants, factors influencing the stability of metal complexes with reference to the nature of metal ion and ligands, the Irving-William series, chelate effect.

**Determination of stability constants:** Theoretical aspects of determination of stability constants of metal complexes by spectrophotometric and polarographic methods.

**Crystal field theory:** Salient features of CFT, d-orbital splitting in octahedral, tetrahedral, square planar and tetragonal complexes, Jahn-Teller distortions, measurement of  $10 Dq$  and factors affecting it. Evidences for metal-ligand covalency.

**Molecular Orbital Theory:** MOT to octahedral, tetrahedral and square planar complexes without and with pi-bonding.

#### UNIT-II

[16 HOURS]

**Electronic spectra:** Introduction, selection rules and intensities, electronic spectra of octahedral and tetrahedral complexes, Term symbols for  $d^n$  ions, Orgel and Tanabe-Sugano diagrams, charge-transfer spectra. Ligand-field transition. Charge transfer and energy applications. Optical rotatory dispersion and Circular dichroism. Magnetic circular dichroism.

**Magnetic properties:** Introduction, magnetic susceptibility and its measurements, spin and orbital contributions to the magnetic moment, the effects of temperature on  $\mu_{\text{eff}}$ , spin-cross over, ferromagnetism, anti-ferromagnetism and ferrimagnetism.

**Applications of infrared spectroscopy of coordination compounds:** Metal complexes of ammine, nitro, nitrito, hydroxo, carbonato, sulphato, cyano, cyanato and thiocyanato complexes.

#### UNIT-III

[16 HOURS]

**Reactions and Mechanisms:** Introduction. Substitution reactions- Inert and labile compounds, mechanisms of substitution. Kinetic consequences of Reaction pathways- Dissociation, interchange and association. Experimental evidence in octahedral substitution- Dissociation, associative mechanisms, the conjugate base mechanism, the kinetic chelate effect.

**Stereochemistry of reactions-** Substitution in *trans* and its complexes, isomerization of chelate rings. Substitution reactions of square-planar complexes-kinetics and stereochemistry of square-planar substitutions, evidence for associative reactions, explanations of the *trans* effect.

Electron-transfer processes: Inner-sphere mechanism and outer-sphere mechanism, conditions for high and low oxidation numbers.

**Photochemistry of coordination compounds:** Photochemistry of chromium(III) ammine compounds, Light-induced excited state spin trapping in iron(II) compounds and MLCT photochemistry in pentammineruthenium(II) compounds.

## References

6. Basic Inorganic Chemistry- 3<sup>rd</sup> edition, F.A. Cotton, G. Wilkinson and P.L. Gaus, John Wiley and Sons, (2002).
7. Infrared and Raman Spectra of Coordination Compounds, Part-B- 6<sup>th</sup> edition, K. Nakamoto, John Wiley and Sons (2009).

## CHO HCT: 2.2. SYNTHETIC ORGANIC CHEMISTRY

### UNIT-I

[16 HOURS]

**Oxidation:** Oxidation with chromium and manganese reagents ( $\text{CrO}_3$ ,  $\text{K}_2\text{Cr}_2\text{O}_7$ , PCC, PDC, Sarret reagent,  $\text{MnO}_2$ ,  $\text{KMnO}_4$ , ozone, peroxides and peracids, periodic acid,  $\text{OsO}_4$ ,  $\text{SeO}_2$ , NBS, Oppenauer oxidation, Sharpless epoxidation).

**Reduction:** Catalytic hydrogenation (homogeneous and heterogeneous) – catalysts (Pt, Pd, Ra-C, Ni, Ru, Rh), solvents and reduction of functional groups, catalytic hydrogen transfer reactions. Wilkinson catalyst,  $\text{LiAlH}_4$ ,  $\text{NaBH}_4$ , DIBAL-H, Sodium cyanoborohydride, dissolving metal reactions (Birch reduction). Leukart reaction (reductive amination), diborane as reducing agent, Meerwein-Ponndorf-Verley reduction, Wolff-Kishner reduction, Clemensen reduction, tributyl tinhydride, stannous chloride, Bakers yeast, Organoboron compounds: Introduction and preparations. Hydroboration and its applications. Reactions of organoboranes: isomerization reactions, oxidation, protonolysis, carbonylation, cyanidation. Reactions with aldehydes or ketones (*E* and *Z*-alkenes).

### UNIT-II

[16 HOURS]

**Reagents and reactions in organic synthesis:** Use of following reagents in organic synthesis and functional group transformations: Lithium diisopropylamide (LDA), Gilman reagent, dicyclohexyl carbodimide (DCC), dichlorodicyanoquinone (DDQ), Silane reagents-trialkylsilyl halides, trimethylsilyl cyanide, trimethyl silane, phase transfer catalyst, crown ethers, cyclodextrins, Ziegler-Natta catalyst, diazomethane, Woodward and Prevost hydroxylation, Stark enamine reaction, phosphorous ylides - Wittig and related reactions, sulphur ylides – reactions with aldehydes and ketones, 1,3-dithiane anions - Umpolung reaction, Peterson reaction. Palladium reagents: Suzuki coupling, Heck reaction, Negishi reaction. Green Chemistry: Definition and principles,

planning green synthesis in the laboratory, green preparations- aqueous reactions, solid state (solvent free) reactions, photochemical reactions, enzymatic transformations and reactions in ionic liquids.

### UNIT-III

[16 HOURS]

**Molecular rearrangements:** Introduction Carbon to carbon migration: Pinacol-pinacolone, Wagner-Meerwein, Benzidine, benzylic acid, Favorskii, Fries rearrangement, dienophile rearrangement. Carbon to nitrogen migration: Hofmann, Curtius, Lossen, Schmidt and Beckmann rearrangements. Miscellaneous rearrangements: Wittig, Smiles, Bayer-Villegier rearrangement and Barton reaction.

**Retrosynthesis:** Introduction to disconnection approach: Basic principles and terminologies used in disconnection approach. One group C-X and two group C-X disconnections. Synthons and synthetic equivalents. Retrosynthesis and synthesis of benzofurans, *p*-methoxy acetophenone, saccharine,  $\alpha$ -bisabolene, nuciferal, tetralone, ibuprofen, functional group transformations in organic synthesis; nitro to keto, nitro to aniline, acid to alcohol etc..

11. Organic synthesis II edition, V. K. Aluwalia and Renu Agarwal.
12. Organic synthesis, Robert E. Ireland.
13. Schaum's outline of theory and problems of Organic Chemistry, Harbert Meislich, Howard Nechamkin and Jacob Sharefkin.
14. Organic chemistry by Clayden, Greeves, Warren and Wothers.

### CHP HCT: 2.3. PRINCIPLES OF PHYSICAL CHEMISTRY

#### UNIT-I

[16 HOURS]

**Quantum Chemistry:** Introduction to quantum mechanics: Schrödinger wave equation, time-independent and time dependent Schrödinger wave equation and the relation between their solutions. Eigen functions and Eigen values. Physical interpretation of wave function. Concept of operators – Laplacian, Hamiltonian, Linear and Hermitian operators. Angular momentum operators and their properties. Commutative and non-commutative operators. Normalization, orthogonality and orthonormality of wave functions. Postulates of quantum mechanics. Solutions of Schrödinger wave equation for free particles, particle in a ring, particle in three dimensional box. Quantum mechanical degeneracy, tunnelling (no derivation). Wave equation for H-atom,

separation and solution of  $R$ ,  $\phi$  and  $\theta$  equations. Application of Schrodinger equation to rigid rotator and harmonic oscillator. Eigen functions and Eigen values of angular momentum. Ladder operator method for angular momentum.

## UNIT-II

[16 HOURS]

**Statistical thermodynamics:** Objectives of statistical thermodynamics, concept of distribution, types of ensembles. Thermodynamic probability and most probable distribution law. Partition functions – definition, evaluation of translational, rotational and vibrational and electronic partition functions for monoatomic, diatomic and polyatomic gaseous molecules. Sackur-Tetrode equation for entropy of translation function. Calculation of thermodynamic functions and equilibrium constants in terms of partition functions. Different distribution laws (Types of statistics): Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac Statistics (derivation of the three distribution laws). Comparison of Bose-Einstein and Fermi-Dirac Statistics with Maxwell-Boltzmann statistics. Problems and their solutions.

**Phase rule studies:** Thermodynamic derivation of phase rule. Application of phase rule to the two component systems - compound formation with congruent melting point and incongruent melting points, Roozeboom's classification. Application of phase rule to three component systems- systems of three liquids and systems of two salts and water.

## UNIT-III

[16 HOURS]

**Polymers:** Fundamentals of polymers - monomers, repeat units, degree of polymerization. Linear, branched and network polymers. Classification of polymers, Polymerization - condensation, addition, free radical, ionic, co-ordination polymerization and ring opening polymerization. Molecular weight and size, polydispersion. Average molecular weight concepts – number, weight and viscosity average molecular weight. Determination of molecular weights - viscosity method, osmotic pressure method, sedimentation and light scattering methods.

**Kinetics of Polymerization** - Condensation, addition, free radical, ionic, co-ordination polymerization.

**Phase transitions in polymers and thermal characterization:** Glass transition, crystallinity and melting- correlation with the polymer structure.

**Polymers in solution:** Criteria of polymer solubility, thermodynamics of polymer solutions.

**Colloids:** Types and classification, Micelles: Surface active agents, micellization, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of surfactants, micellar catalysis.

10. Polymer Characterization, D. Campbell and J.R. White, Chapman and Hall, New York.
11. Fundamental Principles of Polymer Materials, R.L. Rosen, John Wiley and Sons, New York.

## CHG HCT: 2.4. MOLECULAR SYMMETRY AND SPECTROSCOPY

### UNIT-I

[16 HOURS]

**Molecular symmetry and group theory:** Symmetry elements and symmetry operations.

**The Point Groups Used with Molecules:** Concept of a group, definition of a point group. Classification of molecules into point groups. Subgroups.

Hermann-Mauguin symbols for point groups. Multiplication tables ( $C_{2v}$ ,  $C_{2h}$  and  $C_{3v}$ ). Matrix notation for the symmetry elements. Classes and similarity transformation.

**Representation of groups:** The Great Orthogonality theorem and its consequences.

Character tables ( $C_s$ ,  $C_i$ ,  $C_2$ ,  $C_{2v}$ ,  $C_{2h}$  and  $C_{3v}$ ). Symmetry and dipole moment.

**Applications of group theory:** Group theory and hybrid orbitals.

**Symmetry in Chemical bonding:** Group theory to Crystal field theory and Molecular orbital theory (octahedral and tetrahedral complexes).

**Symmetry in Vibrational Spectroscopy:** Determining the symmetry groups of normal modes for non-linear molecules ( $H_2O$ ,  $NH_3$ ,  $CH_4$ ,  $trans-N_2F_2$ ) and linear molecules ( $CO$ ,  $HCl$ ,  $HCN$  and  $CO_2$ ) (Integration method).

### UNIT-II

[16 HOURS]

**Microwave spectroscopy:** Rotation spectra of diatomic Molecules - rigid and non rigid rotator model. Rotational quantum number and the selection rule. Effect of isotopic substitution on rotation spectra. Classification of polyatomic molecules based on moment of inertia. Rotation spectra of polyatomic molecules ( $OCS$ ,  $CH_3F$  and  $BCl_3$ ). Moment of inertia expression for linear tri-atomic molecules. Applications - Principles of determination of Bond length and moment of inertia from rotational spectra. Stark effect in rotation spectra and determination of dipole moments.

**Vibration spectroscopy:** Vibration of diatomic molecules, vibrational energy curves for simple harmonic oscillator. Effects of anharmonic oscillation, expressions for fundamental and overtone frequencies. Vibration - rotation spectra of carbon monoxide. Vibration of polyatomic molecules – The number of degrees of freedom of vibration. Parallel and perpendicular vibrations ( $CO_2$  and  $H_2O$ ). Combination, difference and hot bands. Fermi resonance. Force constant and its significance. Theory of infrared absorption and theoretical group frequency. Intensity of absorption band and types of absorptions. Applications: Structures of small molecules:  $XY_2$  – linear or bent,  $XY_3$  – planar or pyramidal.

**Raman spectroscopy:** Introduction, Raman and Rayleigh scattering, Stokes and anti-Stokes lines, polarization of Raman lines, depolarization factor, polarizability ellipsoid. Theories of Raman spectra - classical and quantum theory. Rotation-Raman and vibration-Raman spectra. Raman activity of vibrations, rule of mutual exclusion principle. Vibration modes of some simple molecules and their activity.

### UNIT-III

[16 HOURS]

**UV Visible spectroscopy:** Quantitative aspects of absorption – Beer's law, Technology associated with absorption measurements. Limitations– real, chemical, instrumental and personal. Theory of molecular absorption. Vibration- rotation fine structure of electronic spectra. Types of absorption bands-  $n$  to  $\pi^*$ ,  $\pi$  to  $\pi^*$ ,  $n$  to  $\sigma^*$  and  $\sigma$  to  $\sigma^*$ , C-T and ligand field. Instrumentation.

**Applications:** Qualitative and quantitative analysis of binary mixtures, measurements of dissociation constants of acids and bases, determination of molecular weight. Woodward's empirical rules for predicting the wavelength of maximum absorption for olefins, conjugated dienes, cyclic trienes and polyenes,  $\alpha,\beta$ -unsaturated aldehydes and ketones, benzene and substituted benzene rings.

**Resonance Raman Spectroscopy:** Resonance Raman Effect and its applications. Non-linear Raman effects: Hyper, stimulated and inverse Raman effects. Coherent Anti-Stokes Raman Scattering and its applications.

## OPEN ELECTIVE (FOR NON-CHEMISTRY STUDENTS ONLY)

### CH OET: 2.1/3.1- CHEMISTRY

#### UNIT-I

[16 HOURS]

**Periodic Table and chemical Periodicity:** Periodic properties of elements, State of Matter, their resources. Important periodic properties of the elements, covalent radii, ionic radii, ionization potential, electron affinity and electronegativity.

**Structure and Bonding:** Properties of ionic compounds, structure of crystal lattices (NaCl, CsCl, ZnS, Wurtzite and rutile), Lattice energy, Born-Haber Cycle, radius ratio rules and their limitations. MO treatment for homo- and heteronuclear diatomic molecules. VSEPR model to simple molecules. Factors affecting the radii of ions, covalent character in ionic bonds, hydration energy and solubility of ionic compounds.

**Concepts of Acids and Bases:** Review of acid base concepts. Lux-Flood and solvent system concepts. Hard-soft acids and bases. Applications.

#### UNIT-II

[16 HOURS]

**Bonding and molecular structure:** Introduction to organic chemistry, atomic orbitals, sigma and pi bond formation-molecular orbital (MO) method, sp, sp<sup>2</sup> and sp<sup>3</sup> hybridization, bond length, bond dissociation energies and bond angles (open chain and cyclic compounds). Electronegativity and polarity of the bonds. Classifications and reactions of organic compounds (with examples).

**Acids and bases:** Hydrogen bonding, resonance and inductive effective on strengths of acids and bases.

**Biological importance of natural products:** Amino acids, proteins, carbohydrates (cellulose, starch, glycogen), lipids (fats and oils, phospholipids), prostaglandins, nucleic acids, steroids, alkaloids, vitamins, flavonoids.

**Applications of synthetic products:** Dyes, drugs, polymers (plastics), soaps and detergents, pesticides and pheromones.

#### UNIT-III

[16 HOURS]

**Thermodynamics:** First and second laws of thermodynamics. Concept of entropy and free energy, entropy as a measure of unavailable energy. Entropy and free energy changes and spontaneity of process.

**Chemical kinetics:** Rate and order of reaction. Factor affecting the rate of reaction. and determination Order of reaction. Energy of activation and its determination. Brief account of collision and activated complex theories.

**Ionic equilibria:** pH scale, buffer solutions, calculation of pH of buffer solutions, buffer capacity and buffer index, buffer mixtures.

**Solutions:** Concentration units, solutions of liquids in liquids, Raoult's law, ideal and non-ideal solutions.

**Electrochemistry:** Electrolytic conductance, specific, equivalent and molar conductance, ionic mobility and transference number, factors affecting the electrolytic conductance, Arrhenius theory of strong and weak electrolytes, assumptions of Debye-Huckel theory of strong electrolytes. Single electrode potential, reference electrodes, galvanic cells, emf of galvanic cells and construction of electrochemical cells.

## UNIT-IV

[16 HOURS]

**Basic Statistics and Data Handling:** Significant figures, accuracy and precision. Types of errors: Determinate error and indeterminate error. Definitions for statistics. Quantifying random error: Confidence limits, variance. Rejection of results.

**Applications of titrimetric methods:** Introduction, theory and applications of acid base titrimetry, complexometric titrations and redox titrimetry

**Separation techniques:** Purification-Crystallization, sublimation, fractional crystallization, distillation techniques (simple distillation, steam distillation, distillation under reduced pressure, and fractional distillation), solvent extraction.

**Chromatography:** Thin layer chromatography and ion-exchange chromatography and their applications in the separation of the components from the mixture.

10. Modern Analytical Chemistry, David Harvey, McGraw Hill, New Delhi, 2000.

## THIRD SEMESTER

### CHI HCT: 3.1. ADVANCED INORGANIC CHEMISTRY

#### UNIT-I

[16 HOURS]

**Fundamental concepts:** Introduction, Classification of organometallic compounds by bond type, nomenclature, the effective atomic number rule, complexes that disobey the EAN rule, common reactions used in complex formation.

**Organometallics of transition metals:** Preparation, bonding and structures of nickel, cobalt, iron and manganese carbonyls. Preparation and structures of metal nitrosyls.

**Ferrocene:** Preparation, structure and bonding. **Metal-carbene and metal-carbyne complexes.**

**Complexes containing alkene, alkyne, arene and allyl ligands:** Preparation, structure and bonding.

#### UNIT-II

[16 HOURS]

**General principles of Catalysis:** Language of catalysis. Homogeneous and heterogeneous catalysts.

**Homogeneous catalysis - Industrial Applications:** Alkene hydrogenation and hydroformylation, The Wacker's process, Monsanto acetic acid process and L-DOPA synthesis, alkene oligomerizations, water-gas shift reactions. The Reppe reaction.

**Heterogeneous catalysis** -The nature of heterogeneous catalysts. Alkene polymerization: Ziegler-Natta catalysis, Fischer-Tropsch carbon chain growth. New directions in heterogeneous catalysis.

**Zeolites as catalysts for organic transformation:** Uses of ZSM - 5.

**Alkene metathesis,** hydroboration, arylation or vinylation of olefins (Heck reaction).

**Biological and Medicinal Applications:** Organomercury, organoboron, organosilicon and organoarsenic compounds.

#### UNIT-III

[16 HOURS]

**Chemistry of main group elements:** Diborane and its reactions, polyhedral boranes(preparation, properties, structure and bonding). Wade's rules, carboranes andmetallo-carboranes. Borazines. Phosphazenes, S-N compounds.

**Metal clusters:** Evidences and factors favoring of M-M bonding, Wade's-Mingo's-Lauher rules, bi, tri, tetra, penta and hexa nuclear metal carbonyl clusters.

Low and high nuclearity carbonyl clusters. Electron counting schemes in carbonyl clusters. The isolobal analogy.

**Silicates:** Structure, classification - silicates with discrete anions, silicates containing chainanion, silicates with layer structure, silicones with three dimensional net-work and applications.

**Silicones:** General methods of preparation, properties. Silicone polymers - silicone fluids, silicone greases, silicone resins, silicone rubbers and their applications.

## CHO HCT: 3.2. ORGANOMETALLIC AND PHOTOCHEMISTRY

### UNIT-I

[16 HOURS]

**Photochemistry:** Light absorption and electronic transitions, Jablonski diagram, intersystem crossing, energy transfer, sensitizers, quenchers. Photochemistry of olefins, conjugated dienes, aromatic compounds, ketones- Norrish type-I and Norrish type-II reactions, enones, Paterno-Buchi reaction, di- $\pi$ - rearrangements, photooxidations, photoreductions.

**Pericyclic reactions:** Electrocyclic reactions: Stereochemistry, symmetry and Woodward-Hofmann rules for electrocyclic reactions, FMO theory of electrocyclic reactions, correlation diagram for butadiene to cyclobutene and hexatriene to cyclohexadiene systems. Cycloaddition reactions: Classification, analysis by FMO and correlation diagram method. Cycloaddition reactions: [2+2] and [4+2] cycloadditions- FMO and correlation diagram method Deils-Alder reaction, hetero Diels-Alder reaction and their applications. Intra and intermolecular 1,3-dipolar cycloadditions: involving nitrile oxide, nitrile imine, nitrile ylide and their application in organic synthesis. Sigmatropic reactions: Classification, stereochemistry and mechanisms. suprafacial and antarafacial shifts of H and carbon moieties. [3,3] and [5,5]- sigmatropic rearrangement, Claisen, Cope and aza-Cope rearrangement.

## UNIT-II

[16 HOURS]

**Chemistry of organometallic compounds:** Synthesis and reactions of organolithium (n-BuLi, PhLi), organocadmium, organomagnesium (Grignard reagent), organoselenium and organotellurium. Organoaluminium reagents: Preparation, site selective and stereoselective additions of nucleophiles mediated by organoaluminum reagents, reaction with acid chlorides, allyl vinyl ethers, 1,2-addition to imines and application in the synthesis of natural products. Organocopper reagents: Gilman reagent, preparation, reactions with aldehydes, ketones and imines. Application in the synthesis of brevicomin, Organozinc reagents: Preparation - oxidative addition and transmetallation, addition reactions of alkyl, aryl, allylic and propargylic zinc reagents, diastereoselective and enantioselective addition reaction with aldehydes, Reformatsky reaction. Organotin reagents: tributyltin hydride, Barton decarboxylation reaction, Barton deoxygenation reaction, Stille coupling, Stille-Kelley coupling reactions, Barton McCombie reaction, Keck stereoselective allylation and other applications.

## UNIT-III

[16 HOURS]

**Asymmetric synthesis:** Definition, importance, mechanism, energy consideration, advantages and limitations, methods of determination of enantiomeric excess. Methods of asymmetric induction:

**Topocity-Prochirality:** Substrate selectivity - Diastereoselectivity and enantioselectivity-Substrate controlled methods-use of chiral substrates - examples

**Auxiliary controlled methods:** Use of chiral auxiliaries - Chiral enolates-alkylation of chiral imines - Asymmetric Diels - Alder reaction

**Reagent controlled methods:** Use of chiral reagents - Asymmetric oxidation - Sharpless epoxidation - Asymmetric reduction - Use of lithium aluminium hydride and borate reagents. Synthesis and applications of oxazaborolidines, IPC-BBN, IPC2BH, (*S*)-BINAP-DIAMINE and (*R*)-BINAL-H. Use of (*R,R*)-DIPAMP, (*S,S*)-CHIRAPHOS, (*R,R*)-DIOP, SAMP, RAMP, *S*-Proline, *S*-PBMgCl, (-)-BOAlCl<sub>2</sub>, (+) and (-)-DET.

## CHP HCT: 3.3. ADVANCED PHYSICAL CHEMISTRY

### UNIT-I

[16 HOURS]

**Homogeneous Catalysis:** Electronic and structural effects on acidity and basicity. Hard and soft acids and bases. Acidity functions: Hammett acidity function, Zuckerman-Hammett hypothesis, Bonnett hypothesis. Industrial catalysis: Catalyst carrier, promoter, inhibitor and catalyst poison.

**Enzyme kinetics:** Effect of substrate concentration (Michaelis - Menton equation), Effect of pH, effect of catalysts and inhibitors (substrate, zeolite,  $\text{Cr}^{3+}$ ,  $\text{Fe}^{2+}$  ZnO, U.V light), effect of temperature. A brief kinetic and mechanistic applications of glucose oxidase in the oxidation of glucose.

**Linear Free Energy Relationship:** Hammett equation, Taft equation, Okamoto Brown equation and its application to oxidation of amino acids and aromatic amines. Swain-Scott and Edward equation. Winstein - Grunwald relationship. Isokinetic relationship and significance of isokinetic temperature, Exner criterion.

**Kinetic Isotope Effect:** Theory of kinetic isotope effect - normal and inverse isotope effect, primary isotope effect, secondary isotope effect, solvent isotope effect.

### UNIT-II

[16 HOURS]

**Electrochemical cells and batteries:** Introduction, galvanic and electrolytic cells, schematic representation of cells. Faraday's law, mass transfer in cells. Batteries: Classification, characteristics, primary, secondary and lithium batteries, fuel cells.

**Electroplating:** Definition, theory and mechanism of electroplating, effect of plating variables on the properties of electro deposits, comparative account of complexing and non-complexing baths (general treatment), additives on plating baths and their significance.

**Metallic coating:** Preparation of substrate surface, electroplating of Cu and Cr. Application of Au and Ag plating.

**Corrosion:** Types of corrosion, basis of electrochemical corrosion, theories and mechanism of wet corrosion. Thermodynamic aspects of corrosion. Current - potential relations (Evan diagram) in corrosion cells. Factors influencing the rate of corrosion: Metal and environmental factors. Kinetic aspects corrosion: Corrosion rate measurement by different methods - chemical and electrochemical methods. General aspects of corrosion prevention and control - designing aspects, effect of alloying and surface modification. Corrosion prevention by painting, phosphating and anodic (passivation) and cathodic protection. Corrosion inhibitors: Introduction, classification, Characteristics and requirements of efficient corrosion inhibitors, Green inhibitors and their significance, Corrosion inhibition mechanism.

### UNIT-III

[16 HOURS]

**Fundamentals of X-ray crystallography:** Law of interfacial angles, laws of symmetry, Miller indices, Bragg equation (No derivation), Experimental methods - powder and rotating crystal methods, indexing of powder and rotating crystal photographs. Atomic scattering factor, structure factor, Fourier synthesis and electron density diagrams. Electron diffraction of gases, experimental technique, Scattering-Intensity curves, Wierl

equation (no derivation), Radial distribution method determination of bond lengths and bond angles.

**Imperfections in atomic packing:** Types of imperfections, classification of imperfections, point defects, Schottky defects, Frenkel defects, disordered crystals, line defects, dislocation types, plane defects, small-angle and large-angle boundaries, stacking faults, crystal growth and twinning, non-stoichiometry.

**Imperfections and physical properties:** electrical, optical, magnetic, thermal and mechanical properties.

## CHG HCT: 3.4. MOLECULAR SPECTROSCOPY

### UNIT-I

[16 HOURS]

**NMR Spectroscopy:** Magnetic properties of nuclei (magnetic moment, g factor, nuclear spin), effect of external magnetic field on spinning nuclei, Larmor precession frequency, resonance conditions, population of nuclear magnetic energy levels, relaxation processes, relaxation time, line width and other factors affecting line width. Chemical Shift: Standards employed in NMR, factors influencing chemical shift: electronegativity, shielding and deshielding, van der Waals deshielding magnetic anisotropy, H-bonding, diamagnetic and paramagnetic anisotropies, spin-spin coupling, chemical shift values and correlation for protons bonded to carbon and other nuclei, Instrumentation. Chemical shift equivalence and magnetic equivalence, effects of chiral centre, Karplus curve-variation of coupling constants with dihedral angle. Complex NMR Spectra: Simplification of complex spectra-isotopic substitution, increased magnetic field strength, double resonance and lanthanide shift reagents, Nuclear Overhauser Effect

(NOE), FT-NMR, Spectroscopy and advantages.  $^{13}\text{C}$ -NMR Spectroscopy, multiplicity-Proton decoupling-Noise decoupling-Off resonance decoupling-Selective proton decoupling - Chemical shift, application of  $^{13}\text{C}$ ,  $^{19}\text{F}$ ,  $^{31}\text{P}$ ,  $^{11}\text{B}$  and  $^{15}\text{N}$ . Applications of NMR: Structural diagnosis, conformational analysis, keto-enol tautomerism, H bonding. Solid state NMR and its applications.

**Multiple resonance spectroscopy:** Introduction to 2D-techniques: DEPT, COSY and NOESY.

## UNIT-II

[16 HOURS]

**Electron Spin Resonance Spectroscopy:** Basic principles, hyperfine couplings, the 'g' values, factors affecting 'g' values, isotropic and anisotropic hyperfine coupling constants, Zero Field splitting and Kramer's degeneracy. Measurement techniques and Applications to simple inorganic and organic free radicals and to inorganic complexes.

**NQR Spectroscopy:** Introduction, Principles, Quadrupolar nuclei, electric field gradient, nuclear quadrupole coupling constants, energies of quadrupolar transitions, effect of magnetic field. Applications.

**Mössbauer spectroscopy:** The Mössbauer effect, chemical isomer shifts, quadrupole interactions, magnetic splitting, measurement techniques and spectrum display, application to the study of  $\text{Fe}^{2+}$  and  $\text{Fe}^{3+}$  compounds; iron in very high oxidation states-  $\text{Fe(V)}$  and  $\text{Fe(VI)}$  nitride complexes;  $\text{Sn}^{2+}$  and  $\text{Sn}^{4+}$  compounds, nature of M-L bond, coordination number and structure, detection of oxidation states and an interhalogen compound  $\text{I}_2\text{Br}_2\text{Cl}_4$ .

**Photoelectron Spectroscopy:** Introduction, principles, chemical shifts, photoelectron spectra of simple molecules. X-ray photoelectron and Auger electron spectroscopy- Principles and applications.

## UNIT-III

[16 HOURS]

**IR spectroscopy:** Introduction, instrumentation, sample handling, Characteristic group frequencies and skeletal frequencies. Finger print region, Correlation chart. Identification of functional groups- alkanes, alkenes, alkynes, aromatics, carbonyl compounds (aldehydes, ketones, esters and lactones), halogen compounds, sulphur and phosphorus compounds, amides, lactams, amino acids and amines, Factors affecting group frequencies and band shapes, conjugation, resonance and inductance, hydrogen bonding and ring strain. tautomerism, *Cis-trans* isomerism. Applications of IR spectroscopy.

**Mass Spectrometry:** Basic principles, Instrumentation -Mass spectrometer, interpretation of mass spectra, resolution, exact masses of nuclides, molecular ions, meta-stable ions and isotope ions. Different methods of ionization (chemical ionization, electron impact, field ionization, MALDI etc.). Fragmentation processes-representation of fragmentation, basic fragmentation types and rules. Factors influencing fragmentations and reaction pathways. McLafferty rearrangement. Fragmentations (fragmentation of organic compounds with respect to their structure determination) associated with functional groups- alkanes, alkenes, cycloalkanes, aromatic hydrocarbons, halides, alcohols, phenols, ethers, acetals, ketals, aldehydes, ketones, quinines, carboxylic acids, esters, amides, acid chlorides, nitro compounds, amines & nitrogen heterocycles. Fragmentation patterns of glucose, myrcene, nicotine, retro Diels-Alder fragmentation. Application in structure elucidation and evaluation of heats

of sublimation & ionization potential. Nitrogen rule. LC-MS and GC-MS, High resolution mass spectroscopy. Composite problems involving the applications of UV, IR,  $^1\text{H}$  and  $^{13}\text{C}$ -NMR and mass spectroscopic techniques. Structural elucidation of organic and inorganic compounds.

### CHA SCP: 3.1/4.1. ANALYTICAL CHEMISTRY PRACTICALS-II

[64 HOURS]

#### PART-A

1. Determination of calcium in limestone by redox, acid-base and complexation titrations.
2. Determination of vitamin C in orange juice by titration with cerium(IV) and with 2,6-dichlorophenol indophenols.
3. Determination of aluminium and magnesium in antacids by EDTA titration.
4. Analysis of a copper-nickel alloy sample for copper and nickel by EDTA titration using masking and selective demasking reactions.
5. Determination of saccharin in tablets by precipitation titration.
6. Determination of ascorbic acid in goose berry/bitter gourd by titrimetry and spectrophotometry using *N*-bromosuccinimide (NBS).
7. Analysis of a mixture of iron(II) and iron(III) by EDTA titration using pH control.
8. Potentiometric titration of a mixture of chloride and iodide.
9. Determination of sulpha drugs by potentiometry using  $\text{NaNO}_2$  and iodometric assay of penicillin.
10. Polarographic determination of copper and zinc in brass.
11. Determination of manganese in steel by extraction-free spectrophotometry and molybdenum in steel by extractive spectrophotometry.
12. Determination of iron in mustard seeds and phosphorous in peas by spectrophotometry.

## PART-B

1. Analysis of waste waters for DO and COD by titrimetry.
2. Analysis of a ground water sample for sulphate by titrimetry (EDTA) and turbidimetry.
3. Potentiometric determination of formula and stability constant of a silver-ammonia complex ion.
4. Photometric and potentiometric titration of iron(III)/copper with EDTA.
5. Analysis of brackish water for chloride content by a) spectrophotometry (mercuric thiocyanate method), b) conductometry (silver nitrate) and c) potentiometry (silver nitrate).
6. Ascorbic acid determination in natural orange juice by coulometry.
7. Analysis of waste water for:
  - a) Phosphate by molybdenum blue method
  - b) Ammonia-nitrogen by Nessler's method
  - c) Nitrite-nitrogen by NEDA method
8. Analysis of a soil sample for:
  - a) Calcium carbonate and organic carbon by titrimetry.
9. Analysis of a soil sample for:
  - a) Available phosphorus by spectrophotometry.
  - b) Nitrate-nitrogen/nitrite nitrogen/ammonia nitrogen by spectrophotometry.
10. Analysis of urine for:
  - a) Urea and uric acid by titrimetry and spectrophotometry.
  - b) Sulphate by precipitation titration after ion-exchange separation.
  - c) Sugar by Benedict's reagent.
11. Analysis of blood for:
  - a) Cholesterol by spectrophotometry
  - b) Bicarbonate by acid-base titration.

### **CHI SCP: 3.2/4.2. INORGANIC CHEMISTRY PRACTICALS-II**

**[64 HOURS]**

#### **PART-A**

1. Determination of bismuth, cadmium and lead in a mixture: Analysis of a low melting alloy (Wood's alloy).
2. Simultaneous spectrophotometric determination of chromium and manganese in a steel solution.
3. Determination of chromium(III) and iron(III) in a mixture: Kinetic masking method.
4. Electrogravimetric determination of:
  - a) Copper in copper sulphate
  - b) Nickel in nickel sulphate
  - c) Copper and nickel in alloy solution
  - d) Lead in lead nitrate.
5. Flame photometric determination of the following metal ions from different samples:
  - a) sodium b) potassium and c) sodium and potassium in a mixture.
6. Polarographic estimation of cadmium and zinc.
7. Determination of iron as the 8-hydroxyquinolate by solvent extraction method.
8. Quantitative determination of nickel using dithizone and 1,10-phenanthroline by synergistic extraction.
9. Spectrophotometric determination of the  $pK_a$  value of methyl red.
10. Semimicro gravimetric determination of aluminium,

#### **PART-B**

11. Preparation and characterization of:
  - a) Chloropentammine cobalt(III) chloride
  - b) Estimation of chloride in a complex by potentiometric or ion-exchange method
  - c) Record the electronic absorption spectrum of a complex and verify TanabeSugano diagram.
12. Preparation of *cis*- and *trans*- dichlorobis(ethylenediammine) cobalt(III)chloride. Record the UV-Vis spectra and compare it with *cis*-form. Measure the molar conductance.
13. Preparation of hexammine cobalt(III) chloride and estimate cobalt ion.

14. Determination of magnetic susceptibility of any two compounds/complexes by Gouy method.
15. Determination of the composition of iron-phenanthroline complex by:
  - (a) Job's method
  - (b) mole-ratio method and
  - (c) Slope-ratio method.
16. Determine the stability constant of iron-tiron/iron-phenanthroline by Turner-Anderson method.
17. Preparation of potassium tris(oxalato)ferrate(III) and estimate the metal ion.
18. Preparation of acetyl acetonatomanganese(III) complex.
19. Preparation of tris(en)nickel(II) chloride and hexamine nickel(II) chloride complexes. Record electronic spectra and evaluate spectrochemical series.
20. Using chloropentammine cobalt(III) chloride, prepare nitro and nitropentammine cobalt(III) chloride. Record the IR spectra of the isomers and interpret.
21. Estimate the chloride ion in a given complex by silver nitrate titration after ion-exchange separation.
22. **Demonstration Experiments:**
  - (a) Recording and interpretation of IR and NMR spectra of complexes.
  - (b) Spectrochemical series- Evaluation of Dq value.
  - (c) DNA interaction with metal complexes by UV-visible absorption and viscosity methods.

## CHO SCP: 3.3/4.3. ORGANIC CHEMISTRY PRACTICALS-II

[64 HOURS]

### PART-A

1. Fractional crystallization: separation of mixture of naphthalene and biphenyl.
2. Thin layer chromatography: Separation of plant pigments.
3. Isolation of piperine from pepper.
4. Isolation of caffeine from tea.
5. Isolation of azeleic acid from castor oil.
6. Isolation of carotene from carrot.
7. Isolation of lycopene from tomato.
8. Isolation of cincole from eucalyptus leaves.

## PART-B

### Isolation of natural products & estimations:

1. Estimation of ketones by haloform reaction.
2. Estimation of sugars by Bertrand's method.
3. Estimation of nitro groups.
4. Estimation of amino group.
5. Determination of iodine value of an oil or fat.
6. Determination of saponification value of oil.
7. Determination of equivalent weight of carboxylic acid by silver salt method

**Interpretation of Spectra:** Structural elucidation of some simple organic compounds by UV, IR, NMR and mass. Spectra have to be provided by the Examiners.

### References

4. Practical Organic Chemistry by Mann F. G. and Saunders.
5. Natural products: A laboratory guide by Raphael Ikan.

## CHP SCP: 3.4/4.4. PHYSICAL CHEMISTRY PRACTICALS-II

[64 HOURS]

### PART-A

1. Determination of order of reaction for the acid hydrolysis of methyl acetate and evaluation of activation parameters.
2. Evaluation of Arrhenius parameters for the reaction between  $K_2S_2O_8$  and KI (First order reaction).
3. Study of kinetics of autocatalytic reaction between oxalic acid and  $KMnO_4$  and determine the order of reaction with respect to  $KMnO_4$ .
4. Kinetics of saponification of ethyl acetate by conductivity method and study the effect of dielectric constant of the medium (using  $CH_3OH$ ).
5. Study of effect of salt (ionic strength) on the kinetics of reaction between potassium persulphate and potassium iodide (second order reaction).
6. Spectrophotometric kinetics of oxidation of indigocarmine (IC) by chloramine-T (CAT) –Determination of order of reaction with respect to [CAT] and [IC].
7. To study the acid catalysed kinetics of oxidation of glycine by chloramine-T (CAT) -determination of order of reaction with respect to [CAT] and [glycine].
8. Study the phase diagram of three component system (Glacial acetic acid-Chloroform-water system / Glacial acetic acid-Acetone-Water system).
9. Study the rate of corrosion and inhibition efficiency of an inhibitor (thiourea) on mild steel/Al/Cu by weight loss method.

### PART-B

1. Conductometric titration of orthophosphoric acid against NaOH.
2. Conductometric titration of a mixture of HCl,  $CH_3COOH$  and  $CuSO_4$  against NaOH.
3. Conductometric titration of thorium nitrate with potassium tartarate.

4. Potentiometric titration of mixture of weak acids (Acetic acid and Monochloroacetic acid) against NaOH.
5. Determination of  $pK_a$  values of phosphoric acid by potentiometric / pH metric method.
6. Potentiometric titration of mixture of KCl+KBr+KI against  $AgNO_3$ .
7. Potentiometric titration of FAS against Ceric sulphate and sodium metavanadate, determine the concentration of FAS and redox potential.
8. Potentiometric titration of lead nitrate against EDTA and determine the concentration of lead nitrate solution.
9. Determination of  $pK$  value of an indicator (methyl orange/methyl red).
10. Spectrophotometric analysis of a mixture of (a)  $KMnO_4$  and  $K_2Cr_2O_7$ .
11. Study of complex formation between ferric salt and salicylic acid.

### References

## SOFT CORE PAPERS

### CHA SCT: 3.1. ELECTROCHEMICAL METHODS OF CHEMICAL ANALYSIS

#### UNIT-I

[16 HOURS]

**Introduction to electrochemical methods and types:** Definitions-electrochemical, galvanic and electrolytic cells, half-cell reactions, anode and cathode, reversible cell, standard hydrogen electrode (SHE), electrode potential (E), standard electrode potential ( $E^0$ ), theoretical cell potential, liquid junction potential, ohmic drop, IR, overvoltage, concentration over potential.

Activity-dependence of electrode potentials- the Nernst equation, reference electrode-calomel and Ag-AgCl electrodes.

**Potentiometry:** Electrode systems, metallic indicator electrodes. Membrane electrodes, Ion-selective electrodes-electrode response and selectivity of glass electrode for pH measurement, errors in the use of glass electrode. Glass electrodes for the measurement of cations other than hydrogen -Solid state electrodes, liquid membrane electrodes. Ion-selective field effect transistors (ISFETS). Gas sensing electrodes. Direct potentiometry: Chemical and environmental applications. Potentiometric biosensors. Potentiometric titrations- acid-base, precipitation and redox titrations. Null-point potentiometry.

**Coulometric methods of analysis:** Basis, Faraday's law and current efficiency. Characterizing coulometric methods. Controlled-potential coulometry- selecting a constant potential, minimising electrolysis time. Instrumentation and applications.

Characterisation applications: determining the number of electrons involved (n) in a reaction. Controlled-current coulometry-minimising current efficiency, detecting the end point.

**Instrumentation:** current sources and cells. Comparing conductometric and conventional titrations. Applications. Automated coulometric titrations.

## UNIT-II

[16 HOURS]

**Electrogravimetric analysis:** Theory, applications, cell processes, deposition and separation, electrolytic separation of metals, applications

**Voltammetry and polarography:** Introduction. Electrodes. Polarographic principles-polarographic current, polarographic potential, polarographic maxima, oxygen removal. Qualitative and quantitative analyses. AC polarography. Pulse polarography. Differential pulse polarography and square wave polarography. Trace analysis by pulse polarography. Inorganic, organic, clinical and environmental applications. Characterisation applications- electrochemical reversibility and determination of 'n'. Determination of equilibrium constants for coupled chemical reactions. Voltammetric principles- Voltammetry at solid electrodes- hydrodynamic voltammetry, triangular voltammetry or cyclic voltammetry. Modified electrodes. Amperometry, amperometric titration. Biamperometry.

**Stripping methods-**anodic and cathodic stripping methods. Electrodeposition step and voltammetric deposition step. Applications of stripping methods. Voltammetry with micro electrodes.

**Chemical sensors and biosensors:** Sensors, electrochemical sensors, optical sensors, thermal and mass-sensitive sensors, sensor arrays.

## CHI SCT: 3.2. FRONTIERS IN INORGANIC CHEMISTRY

### UNIT-I

[16 HOURS]

**Materials chemistry:** Historical Perspectives. Design of new materials through a Critical Thinking Approach. Materials sustainability.

**Synthesis of materials:** The formation of bulk material by different methods.

**Defects and ion transport:** Extended defects. Atom and ion diffusion. Solid electrolytes.

**Metal oxides, nitrides and fluorides:** Monoxides of the 3d metals, higher oxides and complex oxides, oxide glasses, nitrides and fluorides.

**Sulfides, intercalation compounds and metal rich phases:** Layered MS<sub>2</sub> compounds and intercalation, Chevrel phases.

**Ceramic materials:** Sol-gel process and applications of biomaterials of ceramics.

**Inorganic pigments:** Coloured pigments, white and black inorganic materials.

**Molecular materials and fullerenes:** Fullerenes, Molecular material chemistry.

**Silicates:** Structure, classification - silicates with discrete anions, silicates containing chain anion, silicates with layer structure, silicones with three dimensional network and applications.

### UNIT-II

[16 HOURS]

**Nanomaterials- an Introduction.**

**Fundamentals-**Terminology and history.

**Characterization and fabrication:** Top-down and bottom-up fabrication. Solution based synthesis of nanoparticles. Vapour-phase synthesis of nanoparticles. Templated synthesis of nanomaterials using frameworks, supports and substrates. Sonochemical microwave methods for the synthesis of nanoparticles.

Structural study of nanocomposites by different methods.

**Nanostructures and properties**

One-dimensional control: carbon nanotubes and inorganic nanowires.

Two-dimensional control: graphene, quantum wells and solid-state super lattices.

Three-dimensional control: mesoporous materials and composites.

**Some applications of inorganic/organic/polymeric materials:** Optical, electrical, magnetic, and chemical and biosensors.

### CHO SCT: 3.3. CHEMISTRY OF NATURAL PRODUCTS-II

#### UNIT-I

[16 HOURS]

**Alkaloids:** Introduction, classification, isolation and general methods of structural elucidation of alkaloids. Classification of alkaloids. Biological importance of alkaloids. Structural elucidation of nicotine, papaverine, quinine, reserpine and morphine. Biosynthesis of alkaloids (nicotine, coniine and cocaine).

#### UNIT-II

[16 HOURS]

**Steroids:** Introduction, Structural elucidation of cholesterol, bile acids, Ergosterol and its irradiation products. Sex hormones and corticosteroids: Synthesis of estrone, progesterone, androsterone, testosterone. Barton reaction for the synthesis of aldosterone. Brief discussion of homosteroids, norsteroids and oral contraceptives. Biological significance of anabolic steroids.

#### References

- Natural products: Their chemistry and biological significance, J. Mann, R. S. Davidson, J. B. Banthorpe and J. B. Harborne.

### CHP SCT: 3.4. MATERIALS CHEMISTRY

#### UNIT-I

[16 HOURS]

**Chemistry of Nanomaterials:** Fundamentals and importance, metal nanoclusters, magic numbers, theoretical modelling of nanoparticles, geometric structure, electronic structure, reactivity, fluctuations, magnetic clusters, bulk to nano transitions. Semiconducting nanoparticles: optical properties, photo fragmentation, Coulombic explosion.

**Carbon nanoparticles:** Introduction, carbon molecules, nature of carbon bond, new carbon structure. Carbon clusters: Small carbon clusters, C<sub>60</sub>: Discovery, structure, alkali doping, super conductivity. Fullerenes and other bulky balls. Carbon nano-tubes: Fabrication structure, electrical properties, vibrational properties, mechanical properties. Quantum dots, Graphene, and applications of nanomaterials.

**Methods of preparation:** Plasma arc, Chemical vapour deposition (CVD), sol-gel, silica-gel, hydrolysis, condensation, polymerization of monomers to form nanoparticles, solvothermal, and hydrothermal methods, electrochemical, ball milling and pulsed laser methods. Characterization of nanomaterials (X-ray, IR, UV and SEM).

## UNIT-II

[16 HOURS]

**Semiconductors:** Metals, insulators and semiconductors. Band theory, energy bands, intrinsic and extrinsic semiconductors. Conductivity: electrons and holes, temperature dependence on conductivity, Optical properties: absorption spectrum, photoconductivity, photovoltaic effect and luminescence. Junction properties: metal-metal junctions, metal-semiconductor junctions, p-n junctions, transistors, industrial applications of semiconductors: Mixed oxides, spinels and other magnetic materials.

**Superconductors:** Introduction, critical temperature and zero resistivity, Meissner effect, critical magnetic field and its variation with temperature. Type - I and II superconductors, specific heat, isotope effect, basic concepts of BCS theory. High temperature (T<sub>c</sub>) superconductors and its applications.

## FOURTH SEMESTER

### CHI HCT: 4.1. BIOINORGANIC CHEMISTRY

#### UNIT-I

[16 HOURS]

**Structural and molecular biology:** Introduction, The structural building blocks of proteins, the structural building block of nucleic acids. Metal ion interactions with nucleosides and nucleotides. General features of DNA - metal complex interaction.

**Bioenergetics:** Introduction, Redox reactions in metabolism, the central role of ATP in metabolism. Kinetic stability of ATP, Mitochondrial flow of electrons from NADH to O<sub>2</sub>. Phosphorylation and respiratory chain. Oxidative phosphorylation.

**Sodium and potassium-channels and pumps:** Introduction, transport across membranes.

Potassium and sodium channels, The sodium-potassium ATPase, Macrocyclic crown ether compounds, cryptands and ionophores.

**Biochemistry of calcium:** Introduction - comparison of Ca<sup>2+</sup> and Mg<sup>2+</sup>. Biological roles of calcium, binding sites of calcium and proteins, storage of calcium, calcium in muscle contraction, calcium in blood clotting process.

**Vitamin B12 and Coenzymes:** Structural feature, names of different forms, chemistry of cobalamin, biochemical functions of cobalamins, model compounds. Special characteristics of B12 co-enzyme. Photosystems.

#### UNIT-II

[16 HOURS]

**Metal ion transport and storage:** Iron storage and transport: Transferrin, ferritin, phosvitin and gastroferrin. Iron transport in microbes: siderophores, *in vivo* microbial transport of iron.

**Oxygen transport and oxygen uptake proteins:** Properties of dioxygen (O<sub>2</sub>): thermodynamic and kinetic aspects of dioxygen as an oxidant, activation of dioxygen through complexation with metal ions. Haemoglobin (Hb) and Myoglobin (Mb) in oxygen transport mechanism: Introduction to porphyrin system, substituent effects on porphyrin rings, functions of Hb and Mb. Characteristics of O<sub>2</sub>--binding interaction with Hb and Mb. Model compounds for oxygen carriers (Vaska's complex and cobalt(III) - Schiff base complexes). Hemerythrin and hemocyanin.

**Electron transport proteins and redox enzymes:** Iron - sulfur proteins (rubredoxins and ferredoxins) and cytochromes including cytochrome P450. Catalase and peroxidase: Structure and reactivity. **Superoxide dismutase:** Structure and reactivity.

**Molybdenum containing enzymes:** Aspects of molybdenum chemistry, Xanthine oxidase, aldehyde oxidase, sulfite oxidase, nitrogenase and nitrite reductase.

**Non-redox metalloenzymes - Structure and reactivity:** Carboxypeptidase-A, alcohol dehydrogenase, leucineaminopeptidase and carbonic anhydrase.

#### UNIT-III

[16 HOURS]

**Medicinal Inorganic Chemistry: State of the Art, New Trends, and a Vision of the Future:** Introduction, metals and human biochemistry, general requirements.

**Disease due to metal deficiency and treatment:** Iron, zinc, copper, sodium, potassium, magnesium, calcium and selenium.

**Metal complexes as drugs and therapeutic agents:** Introduction, Antibacterial agents, Antiviral agents, **Cancer Therapy:** Current Status and Mechanism of Action of Platinum-Based Anticancer Drugs. Non-platinum anticancer agents.

**Gold-Based Therapeutic Agents: A New Perspective:** Uses for the treatment of rheumatoid arthritis, **Diabetes:** Vanadium and diabetes,

**Metal-Based Radiopharmaceuticals:** Metal complexes as radio diagnostic agents.

**Treatment of toxicity due to inorganics:** General aspects of mechanism of metal ion toxicity,

- (i) Mechanism of antidote complex with poison, rendering it inert: arsenic, lead, mercury, iron and copper.
- (ii) Antidote accelerated metabolic conversion of poison to non-toxic product: cyanide and carbon monoxide.

## CHO HCT: 4.2. HETEROCYCLIC AND BIOORGANIC CHEMISTRY

### UNIT-I

[16 HOURS]

Nomenclature of heterocyclic compounds. Structure, reactivity, synthesis and reactions of furan, pyrrole, thiophene, indole, pyridine, quinoline, isoquinoline, pyrazole, imidazole, pyrone, coumarin, chromones, pyrimidines, purines. Synthesis and synthetic applications of azirines & aziridines, azetidines, oxazolines, isoxazolines, isoxazole, triazole and azepines and benzodiazepines.

## UNIT-II

[16 HOURS]

**Carbohydrates:** Carbohydrates: Introduction, Ring size determination of monosaccharides, configuration and conformations of monosaccharides, anomeric effect, Hudson's rules, epimerization and mutarotation. Synthesis, industrial and biological importance of glycosides, amino sugars, sucrose, maltose and lactose. Polysaccharides: General methods of structure elucidation. Industrial importance and biological importance of cellulose, starch, glycogen, dextran, hemicellulose, pectin, agar-agar. Photosynthesis and biosynthesis of carbohydrates.

## UNIT-III

[16 HOURS]

**Amino Acids:** General structure, physiological properties, protection of functional groups.

**Peptides:** Structure and conformation of peptide bond, peptide synthesis: Solution phase and Merrifield's solid phase synthesis, Racemization and use of HOBt, Synthesis of oxytocin and vasopressin, biological importance of insulin, selective cleavage of polypeptide bonds (chemical and enzymatic). Proteins: Structure determination: C and N terminal residue determination, primary, secondary, tertiary and quaternary structure determination, denaturing and renaturing of proteins.

**Nucleic acids:** Introduction, structure and synthesis of nucleosides and nucleotides, protecting groups for hydroxy group in sugar, amino group in the base and phosphate functions. Methods of formation of internucleotide bonds: DCC, phosphodiester approach and phosphoramidite methods. Solid phase synthesis of oligonucleotides. Structure of RNA and DNA, Crick-Watson model, role of nucleic acids in the biosynthesis of proteins.

**Protecting groups:** Protection of hydroxyl, carboxyl, carbonyl, thiol and amino groups. Illustration of protection and deprotection in synthesis.

8. Heterocyclic chemistry by Achison.
9. Heterocyclic chemistry by Smith and Joule.
10. Heterocyclic chemistry by Pacquette.

## CHP HCT: 4.3. NUCLEAR, RADIATION AND PHOTOCHEMISTRY

### UNIT-I

[16 HOURS]

**Photochemistry:** Introduction to photochemistry, laws of photochemistry, laws of light absorption, quantum yield and its determination, factors affecting quantum yield,

Actinometry - Uranyl oxalate and potassium ferrioxalate actinometers, acetone and diethylketone actinometers. Term symbols for atoms and its significance. Photochemical properties of electronically excited molecules, nature of changes on electronic excitation, shapes of absorption band and Frank Condon principle. Experimental techniques to determine the intermediates in photochemical reactions. Photosensitization: by mercury, dissociation of H<sub>2</sub>. Photochemical kinetics of: Decomposition of CH<sub>3</sub>CHO, formation of HI and HCl. Fluorescence and phosphorescence – theory and applications. Resonance fluorescence and quenching of fluorescence, Kinetics of collisional quenching (Stern-Volmer equation).

**Photocatalyst** – Principle, application of ZnO/TiO<sub>2</sub> photocatalysts in the photo cleavage of dyes, environmentally hazardous waste and industrial effluents. Effect of photo degradation on COD value.

## UNIT-II

[16 HOURS]

**Radiation chemistry:** Introduction, units, interaction of electromagnetic radiation with matter, G-value, LET of radiation. Chemical dosimetry - Fricke and ceric sulphate dosimeters. Radiolysis - cysteine, water and biphenyl. Radioisotopes as tracers, use of isotopic tracers in the elucidation of reaction mechanism, structure determination and solubility of sparingly soluble substances. <sup>14</sup>C dating, medical applications of isotopic tracers. Physico-chemical applications – isotope dilution method, activation analysis and radiometric titrations. Hazards in radiochemical work and radiation protection.

**Radiation detection and measurement:** Experimental techniques in the assay of radioisotopes. Radiation detectors – ionization chambers, proportional and Geiger-Muller counters – G.M. Plateau, dead time, coincidence loss, determination of dead time. Scintillation and semiconductor radiation detectors.

## UNIT-III

[16 HOURS]

**Nuclear chemistry:** Nuclear stability – nuclear forces, packing fraction, binding energy, liquid drop, shell and collective models. Radioactive decay – General characteristics, decay kinetics, parent –daughter decay growth relationships, determination of half-lives. Brief survey of alpha, beta and gamma decays. Nuclear reactions – Bethe's notation, types of nuclear reactions – specific nuclear reactions, photonuclear reactions, Oppenheimer – Phillips process, spallation reactions, Szilard-Chalmers process. Definition of Curie and related calculations. Production of radioisotopes and labelled compounds by bombardment.

**Radiochemical separation techniques:** carriers, solvent extraction and ion ion-exchange methods.

**Nuclear power reactors:** Types of nuclear power reactors, basic features and components of nuclear power reactors. An introduction to breeder reactors.

#### **CHA HCT 4.4. OPTICAL, THERMAL AND KINETIC METHODS OF ANALYSIS**

##### **UNIT-I**

**[16 HOURS]**

**Atomic and molecular spectrometry**-Electromagnetic radiation, atomic energy levels, molecular energy levels, transitions, quantitative spectrometry, Beer-Lambert's law.

**Atomic spectrometry**-Atomic structure and spectra, intensity of spectral lines.

**Arc/spark atomic (optical) emission spectrometry**- Principles, instrumentation, sample preparation, qualitative and quantitative analysis, applications

Glow discharge atomic emission spectrometry-principles, instrumentation, applications.

**Plasma emission spectrometry**- Principles, instrumentation, sample introduction, analytical measurements and applications.

**Inductively coupled plasma-mass spectrometry (ICP-MS)**-Principles, instrumentation and applications.

**Flame emission spectrometry**-principles, instrumentation, flame characteristics, flame processes, emission spectra. Quantitative measurements and interferences. Applications of flame photometry and flame atomic emission spectrometry.

**Atomic absorption spectrometry**- Principles, absorption of characteristic radiation. Instrumentation-sharp line sources- hallow cathode lamps, electrodeless discharge tubes. Sample vaporization- flame vaporization, flameless vaporization, vaporization by reduction and hydride generation. Quantitative measurements and interferences. Applications of AAS.

**Atomic fluorescence spectrometry**-Principles, instrumentation and applications.

**X-ray emission spectrometry**- Principles, instrumentation and applications.

**Molecular fluorescence spectrometry**- Theory- relaxation processes, excitation and fluorescence spectra, fluorescent species, factors affecting fluorescence, effect of concentration on intensity, fluorescence instruments, applications of fluorescence methods. Molecular phosphorescence- phosphorometry, chemiluminescence methods.

##### **UNIT-II**

**[16 HOURS]**

**Thermal methods of analysis:** Introduction, **Thermogravimetric analysis (TGA):** Introduction, types of thermogravimetric analysis, principles. Factors affecting the results - heating rate, furnace, instrument control/data handling. Applications - purity and thermal stability, evaluation of correct drying temperature, analysis of complex mixture and determination of kinetic parameters of thermal degradation.

**Differential thermal analysis (DTA):** Theory - variables affecting the DTA curves. Differences between TGA and DTA. General principles. Instrumentation. Applications -

analysis of the physical mixtures and thermal behaviour study. Determination of melting point, boiling point and decomposition point.

**Differential scanning calorimetry (DSC):** Basic principle. Differences between DTA and DSC. Instrumentation - power compensated DSC, Heat flux DSC. Applications - studies of thermal transitions and isothermal crystallization. Pharmaceutical industry for testing the purity of the samples.

**Microcalorimetry:** Micro-DSC instrumentation, Applications of Micro-DSC, Isothermal titration calorimetry, Microliter-flow calorimetry.

### UNIT-III

[16 HOURS]

**Kinetic methods of analysis:** Analytical uses of reaction rates relative, basis of reaction rate methods, rate laws-first and second order reactions relative rates of reactions, analytical utility of first or pseudo first order reactions, determination of reaction rates, types of kinetic methods-differential methods, integral methods, multicomponent analysis-neglect of reaction of slow-reacting component, logarithmic extrapolation method, reaction rate method, applications-catalyzed reactions, measurement methods for catalyzed reactions, micro determination of inorganic species like iodide, selenium, cobalt & mercury in complex materials, determination of organic species, non-catalytic reactions. Applications of enzyme-catalysed reactions for the analysis of substrates-stoichiometric and rate methods, determination of urea, uric acid, blood glucose, galactose and blood alcohol, determination of enzymes-LDH, GOT and GPT. A brief outline of IR, UV, NMR, Mass spectroscopy as tools for kinetic study.

### SOFT CORE PAPERS

#### CHA SCT 4.1. AUTOMATIC AND METHODS OF CHEMICAL ANALYSIS

##### UNIT-I

[16 HOURS]

**Automated methods of analysis:** An overview, definition, distinction between automatic and automated systems, advantages and disadvantages by automation, types of automated techniques. Nondiscrete techniques, segmented flow methods and basic equipment, special techniques and devices, theoretical considerations and problems, applications. Single channel and multi channel auto analysers, BUN analyzers, automatic glucose analyzers and ammonia in water analyzers, COD analyzers, CFA in industry. Non-segmented flow methods: Flow injection analysis. Principles, types of dispersion, factors affecting dispersion, applications of small, medium and large dispersions. Stopped flow methods, flow injection titrations. Discrete methods: Centrifugal fast scan analyzer, automatic multipurpose analyzers, Automatic elemental analyzer, automated analyzer based on multi layer film-principles, film structure, instrumentation applications. Comparison of discrete and non-discrete methods. Advantages of flow injection measurements over continuous flow measurements.

##### UNIT-II

[16 HOURS]

**Analysis of real samples-**real sample, choice of analytical method-defining the problem, investigating the literature, choosing or devising a method, testing the procedure, analysis of standard samples, using other methods, standard addition to the sample. Accuracy in the analysis of complex materials.

**Decomposing and dissolving the sample-** sources of error in decomposing and dissolution. Decomposing samples with inorganic acids. Microwave decomposition. Combustion methods for decomposing organic samples. Decomposition of inorganic materials with fluxes.

**Clinical Analysis-** Introduction, features of clinical analysis. Composition of blood, collection and preservation of samples. Common determinations - serum electrolytes, blood glucose and blood urea nitrogen, uric acid, albumin and globulins, acid and alkaline phosphates, barbiturates, chloride, sodium and potassium, bicarbonate, serum creatinine and cholesterol. Urine analysis-Principle components. Sample collection and preservation. Determination of creatinine, chloride, uric acid, ammonia, ascorbic acid, bilirubin and calcium.

## CHI SCT: 4.2. BIOINORGANIC PHOTOCHEMISTRY

### UNIT-I

[16 HOURS]

#### **Introduction, Philosophy of bioinorganic photochemistry**

**Fundamentals:** Light and matter. Nature of light, Accessible light sources and Interaction between light and matter.

**Formation and properties of electronic excited states:** Wave mechanics and quantum numbers and Electronic excitation.

**Photophysical deactivation of electronic excited states:** Spontaneous deactivation, Quenching and Coordination and organometallic compounds.

**Photochemical reactions:** Photochemical reaction channels, Intramolecular photoreactions, Photodissociation and photoionization, Photoisomerization, Intermolecular photoreactions, the coordination compound specificity. Ligand field photochemistry, Photochemistry from LC or LLCT states, Inner-sphere charge transfer photochemistry, Outer-sphere charge transfer photochemistry, Photosensitized reactions, Homogeneous photocatalysis.

#### **Natural photo-processes involving inorganic compounds**

**From interstellar space to planetary atmospheres:** Homogeneous systems: from interstellar space to planetary atmospheres and primitive soup models. Heterogeneous photochemistry in ice phases.

### UNIT-II

[16 HOURS]

**Applications: Fluorescent and chromogenic sensing and labeling:** Cations as targets in biochemical sensing Cations common in biological systems, Fluorescent detection of toxic cations, Fluorescent and chromogenic sensing of anions, Common anions and Toxic anions. Optical detection of neutral molecules. Nanoparticles in biochemical sensing and labeling.

**Therapeutic strategies;** Photobio-stimulation, Photo-activation of drugs, Photodynamic therapy, Mechanisms of PDT and PTT. Photosensitizers, Inorganic photosensitizers, Supporting role of metal ions in photodynamic therapy, and Combination of polypyrrrolic photosensitizers and metallo-pharmaceuticals, Recent PDT development and Nanomedical methods.

**Photodynamic inactivation of microorganisms:** Bacteria, Viruses, Fungi and Parasites.

**Phototoxicity and photoprotection:** Chemical and physical photoprotection. Inorganic sunscreens.

**Photocatalysis in environmental protection:** Development of homo- and heterogeneous methods. Homogeneous photocatalysis and heterogeneous photocatalysis. Water and air detoxification. Other applications of photocatalysis.

## CHO SCT: 4.3. MEDICINAL CHEMISTRY

### UNIT-I

[16 HOURS]

**Carotenoids:** Methods of isolation. Structure elucidation and synthesis of  $\beta$ -carotene. Structural relationship of  $\alpha$ -,  $\beta$ - and  $\gamma$ -carotenes.

**Vitamins:** Introduction, constitution, synthesis and biological significance of thiamine, riboflavin, pyridoxine, biotin, ascorbic acid, vitamin A<sub>1</sub> & A<sub>2</sub>, E<sub>1</sub> and E<sub>2</sub>, B<sub>12</sub> and K groups.

### UNIT-II

[16 HOURS]

**Medicinal chemistry:** Introduction, pharmacodynamics, pharmacokinetics, chemotherapy, metabolites antimetabolites, agonists and antiagonists. Classification drugs on the basis of therapeutic action. Concept of pro drug and soft drug. Theories of drug activity: Occupancy theory, rate theory, induced fit theory, concept of drug receptors. Evaluation methods: Free-wilson analysis, Hansch-analysis, ID<sub>50</sub> and IC<sub>50</sub> (mathematical derivation of equation excluded).

**Antipyretics:** Aspirin, paracetamol, phenacetin, novalgin and their mechanism of action.

**Antimalarials:** structure, synthesis and mechanism of action of quinine and chloroquine.

**Hypnotics:** Analgesics and sedatives: phenobarbital, chlordiazepoxide, meprobamate.

**Stimulants:** structure, action and synthesis of caffeine.

**Antineoplastics:** Structure, pharmacological action and synthesis of 5-fluorouracil, chlorambucil, cyclophosphamide and podophyllotoxin.

**Cardiovascular drugs:** Introduction, synthesis of diltiazem, verapamil, methyldopa, atenolol and oxprenolol.

### References

5. Medicinal chemistry by Graham Patrick.

## CHP SCT: 4.4. QUANTUM CHEMISTRY AND BIOSENSORS

### UNIT-I

**16 HOURS]**

**Applications of quantum mechanics:** Variation theorem: Statement and proof, application of variation theorem to a particle in one dimensional box, linear oscillator, H and He-atoms. Molecular orbital theory, LCAO-MO approximation, application to hydrogen molecule ion ( $H_2^+$ ), energy levels of  $H_2^+$ , bonding and antibonding molecular orbitals, energy distribution, potential energy diagrams. Valence bond theory (VB), theory of  $H_2$  molecule, Heitler-London method, energy levels, various modifications of Heitler-London wave function. Comparison of MO and VB theories. SCF method for many electron atom. Slater Orbitals –Effective nuclear charge (ENC), expressions for slater orbitals for 1s, 2s, 3s, 2p and 3d electrons (no derivation), Slater's rules for calculation of ENC. Theories of valence – Introduction, linear and non-linear variation functions, secular equations, coulombic, exchange, normalization and overlap integrals, secular determinants.

**Huckel molecular orbital theory:** Outline of method, assumptions. Application to ethylene, allyl radical, cyclopropenyl radical, butadiene, cyclobutadiene, bicyclobutadiene and benzene. Calculation of delocalization energy, charge density,  $\pi$ -mobile bond order and free valence.

### UNIT-II

**[16 HOURS]**

**Biosensors:** Introduction, electrochemical biosensors: Amperometric, potentiometric and conductometric biosensors. Optical based biosensors: Surface plasma resonance, chemiluminescence, fibre optic biosensors, piezoelectronic sensors, mass selective and thermal sensors. Bio-recognition elements in biosensors, immobilization methods, principles of biorecognition, natural, semi-synthetic and synthetic biorecognition elements. Metabolism sensors: Glucose sensors, galactose sensors. Determination alcohol, ascorbic acid, D-isocitrate, oxalate, oxaloacetate, nitrite, nitrate, carbon monoxide, glycerol, triglycerides and sucrose. Biosensors using coupled enzyme reactions.

**Applications of biosensors:** Determination of glucose in blood, survey of biosensor methods for the determination of glucose. Determination of copper (I) in water using anodic stripping voltammetry.
