## NOTIFICATION

- Sub: Modifications in Syllabus of Entrance Examination to M.Sc. (Mathematics) according to New B.Sc CBCS Syllabus from the academic year 2021-22.
- Ref: 1. Decision of Board of Studies in Mathematics (PG) meeting held on 26.11.2020.
  - 2. Decision of the Faculty of Science & Technology Meeting held on 08.02.2021.
  - 3. Decision of the Academic Council meeting held on 07.04.2021.

\*\*\*\*\*

The Board of Studies in Mathematics (PG) which met on 26.11.2020 has approved the Syllabus of Entrance Examination to M.Sc (Mathematics) as per New B.Sc CBCS Syllabus from the academic year 2021-22.

The Faculty of Science and Technology and Academic Council meeting held on 08.02.2021 and 07.04.2021 respectively have approved the above said proposal and the same is hereby notified.

The detailed Syllabus is annexed. The contents may be downloaded from the University Website i.e., www.uni-mysore.ac.in.

### DRAFT APPROVED BY THE REGISTRAR

DEPUTY REGISTRAR (ACADEMIC) Deputy Registrar (Academic) University of Mysore A Mysore-579 005

To:

- 1. The Registrar (Evaluation), University of Mysore, Mysore.
- 2. The Dean, Faculty of Science & Technology, DoS in Psychology, MGM.
- 3. The Chairperson, DoS in Mathamatics (PG), Manasagangotri, Mysore.
- 4. The Deputy/Assistant Registrar/Superintendent, AB and EB, UOM, Mysore.
- 5. The P.A. to the Vice-Chancellor/Registrar/Registrar (Evaluation), UOM, Mysore.
- 6. Office file.

#### UNIVERSITY OF MYSORE

# ENTRANCE TEST FOR M.Sc. COURCE IN MATHEMATICS (With effect from the academic year 2021-22)

**Eligibility criteria for writing the Entrance Test :** Those candidates who are appearing or have appeared for Final semester/Year of B.Sc./B.Sc. Ed. (RIE) course with Mathematics as Major/Optional subject are eligible to write the entrance test.

**Eligibility criteria for Admission:** The eligibility for admission is 45% of marks (40% for SC, ST and Cat. I candidates ) after deducting 3% for each extra year over normal duration of the course, if any in Mathematics of B.Sc./B.Sc. Ed. (RIE) Examination.

#### ENTRANCE TEST SYLLABUS FOR M.Sc. COURSE IN MATHEMATICS

Unit	Existing	Modified
1	Analytical Geometry:	Analytical Geometry:
	Cartesian coordinates in three	Cartesian coordinates in three dimensional
	dimensional space – Relation between	space – Relation between cartesian
	cartesian coordinates and position vector	coordinates and position vector – Distance
	– Distance formula (cartesian and vector	formula (cartesian and vector form) –
	form) – Division formula (cartesian and	Division formula (cartesian and vector
	vector form) – Direction cosines –	form) – Direction cosines – Direction ratios
	Direction ratios – Projection on a straight	– Projection on a straight line – Angle
	line – Angle between two lines – Area of	between two lines – Area of triangle –
	triangle – volume of a tetrahedron.	volume of a tetrahedron. Straight line –
	Straight line – Equations of straight lines	Equations of straight lines (cartesian and
	(cartesian and vector form) - Planes –	vector form) - Planes – Equations of planes
	Equations of planes (cartesian and vector	(cartesian and vector form) - Normal form –
	form) - Normal form – Angle between	Angle between planes – Coaxial planes –
	planes – Coaxial planes – Parallel and	Parallel and perpendicular planes – length of
	perpendicular planes – length of a	a perpendicular form a point to a plane –
	perpendicular form a point to a plane –	Bisectors of angles between two planes –
	Bisectors of angles between two planes –	Mutual position of a lines and planes –
	Mutual position of a lines and planes –	Shortest distances between two skew lines.
	Shortest distances between two skew	Theory of Equations:
	lines.	Theory of Equations – Euclid's algorithm -
	Quadric Curves:	Polynomials with integral coefficients –
	Translation and rotation of cartesian axes	Remainder theorem – Factor theorem –
	in a plane – Curves of second degree –	Fundamental theorem of algebra (statement
	Discriminant and trace - theorem on	only) – Irrational and complex roots occur
	discriminant and trace – removing the	in conjugate pairs – Relation between roots
	mixed term – removing linear terms –	and coefficients of a polynomial equation –
	proof of the theorem. The set of points	symmetric functions – Transformations –
	(x, y) satisfying equation	Reciprocal equations – Descartes rule of
	$Ax^{2} + 2Bxy + Cy^{2} + Dx + Ey + F = 0$	signs – Multiple roots - Solving cubic
		equations by Cardon's method – solving
		quartic equations by Descarte's Method.

<ul> <li>is either empty or a point consists of one or two lines or is a parabola, an ellipse or a hyperbola – problems there on – Polar equations of a conic – problems there on – Quadratic Surfaces – Sphere – Cylinder – Cone - Ellipsoid – Hyperboloids – Paraboloids - Ruled Surfaces.</li> <li>Differential Calculus: Real Numbers – Inequalities – Absolute Value – Intervals – Functions – Graphs – definition ofδ– £Limit of a function – Left hand and right hand limits – continuity of a function – problems. Differentiation – Linear approximation theorem – derivatives of higher order – Leibnitz's theorem – Monotone functions - Maxima and Minima – Concavity, Convexity and points of inflection Polar coordinates- angel between the radius vector and tangent at a point on a curve – angle of intersection between two cnurves – Pedal equations – Derivative of arc length in cartesian, parametric and polar coordinates, curvature – radius of curvature – circle of curvature – evolutes. Differentiability and its applications: Differentiability. Theorems – Rolle's theorem – Lagranges's Mean valve theorem – Taylor's infinite series and power series expansion – Maclaurin's infinite serie</li></ul>
<ul> <li>is a parabola, an ellipse or a hyperbola – problems there on – Quadratic Surfaces – Sphere – Cylinder – Cone - Ellipsoid – Hyperboloids – Paraboloids - Ruled Surfaces.</li> <li>Differential Calculus: Real Numbers – Inequalities – Absolute Value – Intervals – Functions – Graphs – definition ofo – ɛLimit of a function – Left hand and right hand limits – continuity of a function – problems. Differentiation – Linear approximation theorem – derivatives of higher order – Leibnitz's theorem – Monotone functions - Maxima and Minima – Concavity, Convexity and points of inflection. Polar coordinates- angel between the radius vector and th tangent at a point on a curve – angle of intersection between two cnurves – Pedal equations – Derivative of are length in cartesian, parametric and polar coordinates, curvature – radius of curvature – circle of curvature – evolutes. Differentiability and its applications: Differentiability – Theorems – Rolle's theorem – Generalized mean valve theorem – Cauchy's mean valve theorem – Taylor's infinite series and power series expansion – Maclaurin's infinite series – Indeterminate forms. Asymptotes – Envelopes – Singular points – Tracing of standard curves with Cartesian and polar equations. Partial Derivatives: Functions of two or more variables – Explicit and implicit function – Continuity – Partial derivatives – Differentiable functions – Linear approximation theorem – Homogeneous functions – Euler's theorem – Canin rule</li> </ul>
<ul> <li>on – Polar equations of a conic – problems there on – Quadratic Surfaces – Sphere – Cylinder – Cone - Ellipsoid – Hyperboloids – Paraboloids - Ruled Surfaces.</li> <li>Differential Calculus: Real Numbers – Inequalities – Absolute Value – Intervals – Functions – Graphs – definition ofo – ɛLimit of a function – Lerb hand and right hand limits – continuity of a function – problems. Differentiation – Linear approximation theorem – derivatives of higher order – Leibnitz's theorem – Monotone functions - Maxima and Minima – Concavity, Convexity and points of inflection Polar coordinates- angel between the radius vector and the tangent at a point on a curve – angle of intersection between two enurves – Pedal equations – Derivative of arc length in cartesian, parametric and polar coordinates, curvature – radius of curvature – circle of curvature – evolutes. Differentiability and its applications: Differentiability and its applications: Differentiability and its applications: Differentiability and ute theorem – Taylor's infinite series and power series expansion – Maclaurin's infinite series and points – Tracing of standard curves with Cartesian and polar equations. Partial Derivatives: Functions – The neighborhood of a point – The limit of a function – Continuity – Partial derivatives – Differentiable functions – Linear approximation Heorem – Homogeneous functions – Euler's theorem – Chain rule</li> </ul>
Quadratic Surfaces – Sphere – Cylinder – Cone - Ellipsoid – Hyperboloids – Paraboloids - Ruled Surfaces.         2       Differential Calculus: Real Numbers – Inequalities – Absolute Value – Intervals – Functions – Graphs – definition ofő– ɛLimit of a function – Left hand and right hand limits – continuity of a function – netth and and right hand limits – continuity of a function – netth and and right hand limits – continuity of a function – problems. Differentiation – Linear approximation theorem – derivatives of higher order – Leibnitz's theorem – Monotone functions - Maxima and Minima – Concavity, Convexity and points of inflection. Polar coordinates- angel between the radius vector and the tangent at a point on a curve – angle of intersection between two enurves – Pedal equations – Derivative of arc length in cartesian, parametric and polar coordinates, curvature – radius of curvature – circle of curvature – evolutes. Differentiability and its applications: Differentiability - Theorems – Rolle's theorem – Lagranges's Mean valve theorem – Taylor's infinite series and power series expansion – Maclaurin's infinite series mutpoints – Tracing of standard curves with Cartesian and polar equations. Partial Derivatives: Functions – The neighborhood of a point – The limit of a function – Continuity – Partial derivatives – Differentiable functions – Linear approximation theorem – Homogeneous functions – Euler's theorem – Chain rule       Differentiable functions – Linear approximation

Powers of an element of a group – Subgroups – Cyclic groups, Zn and Z. Cosets, Index of a group, Lagrange's theorem – consequences. Normal subgroups, Quotient groups – Homomorphism, Isomorphism, Automorphism. Fundamental theorem of homomorphism – Isomomorphism – Direct product of groups – Caylay's theorem</li> </ul>	groups – Cayley's theorem.
4 Real Numbers:	No Change
<ul> <li>Keal Numbers:</li> <li>Introduction – Field structure – Order structure - Bounded and unbounded sets – Supremum and infimum – Completeness - Some important subsets of R – Archimedean Property of real numbers – countable and uncountable sets.</li> <li>Limits and continuity:</li> <li>Limits - Continuous functions - discontinuous functions - theorems on continuity - Functions continuous on closed interval - Uniform continuity (explaining the idea). Real sequences:</li> <li>Sequences of real numbers – Bounded and unbounded sequences – Infimum and supremum of a sequence – Limit of a sequence – Sum, product and quotients of limits – Standard theorems on limits – Convergent, divergent and oscillatory sequences – Standard properties – Subsequences – monotonic sequences and their properties – Limit point of a sequence – Cauchy's general principle of convergence – Infinite Series:</li> </ul>	No Unange
divergence and oscillation of series – properties of	

	convergence – Positive term series – Geometric series –	
	Comparison tests – Cauchy's root test – D'Alembert's	
	ratio test, Raabe's test, Integral test – Absolute and	
	conditional convergence - D'Alembert's test for absolute	
	convergence – Leibnitz's test for alternating series.	
	Summation of Binomial. Exponential and logarithmic	
	series.	
	Fourier series:	
	Introduction – Periodic functions – Fourier series and	
	Euler formulae – Even and odd functions – Half range	
	series – Change of interval.	
5	Riemann Integration:	No Change
	The Riemann integral – Upper and lower sums – Criterion	6
	for integrability – Integrability of continuous functions	
	and monotonic functions – Fundamental theorem of	
	Calculus – Change of variables – integration by parts –	
	First and Second mean value theorems of integral	
	calculus.	
	Integral Calculus:	
	Techniques of integrations – Integrals of Algebraic and	
	transcendental functions – Reduction formulae - Definite	
	integrals – properties.	
	Improper Integrals:	
	Improper integrals of the first and second kinds –	
	Convergence – Gamma and Beta functions and results –	
	Connection between Beta and gamma functions –	
	Applications to evaluation of integrals – Duplication	
	formula – Sterling formula.	
	Laplace Transforms:	
	Definition and basic properties – Laplace transforms of	
	$e^{kt}$ , $coskt$ , $sinkt$ , $t^n$ , $cos \Box kt$ , $sin \Box kt$ - Laplace transform	
	of $e^{at}F(t)t^{\frac{1}{2}}$ problems - Theorems on the derivative of	
	Laplace transform and the transform of derivatives -	
	Inverse Laplace transforms – problems – alpha function –	
	theorem on the Laplace transform of integrals – Laplace	
	transform of $\frac{F(t)}{t}$ . Convolution theorem – Simple initial	
	value problems – Special integral equations – Solution of	
	first and second order differential equations with constant	
	coefficients by Laplace transform method – Systems of	
	equations – Laplace transforms of Periodic functions.	
6	Rings and Fields:	No Change
	Rings – Examples – Integral domains – Division rings –	
	Fields – Subrings – subfields - Characteristic of a ring –	
	Ordered integral domain – Imbedding of a ring into	
	another ring – The field of quotients – Ideals – Algebra of	

		Ideals – Principle ideal ring – Divisibility in an integral	
		domain – Units and Associates – Prime Elements –	
		Polynomial rings – Divisibility - Irreducible polynomials	
		- Division Algorithm - Greatest Common Divisors -	
		Euclidean Algorithm – Unique factorization theorem –	
		Prime fields – Quotient rings – Homomorphism of rings –	
		Kernel of a ring homomorphism – Fundamental theorem	
		of homomorphism – Maximal ideals – Prime Ideals –	
		Properties - Unique Factorization domain – Eisenstein's	
		Criterion of irreducibility.	
ľ	7	Differential Equations:	Differential Equations:
		Definition and examples of differential equations. The	Definition and examples of differential equation
		elimination of arbitrary constants - Families of curves -	elimination of arbitrary constants - Families of
		Differential equations of first order, separation of	Differential equations of first order, separation
		variables - equations with homogeneous coefficients –	variables - equations with homogeneous coefficient
		Exact equations - Linear equations of order one. The	Exact equations - Linear equations of order one
		general solution of a linear equation – Integrating factors	general solution of a linear equation – Integrati
		found by inspection. The determination of Integrating	found by inspection. The determination of Inter
		factors. Substitution suggested by the equation.	factors. Substitution suggested by the equation.
		Bernoulli's equation. Coefficients linear in two variables	Bernoulli's equation. Coefficients linear in two
		Equations of first order and higher degree Equations -	Ordinary Linear differential equations with cor
		solvable for x solvable for y solvable for P Clairaut's	coefficients – complementary function – partic
		equation – Singular solutions and geometrical meaning	integral – Inverse differential operators
		Ordinary Linear differential equations with constant	Linear Differential Equations:
		coefficients - complementary function - particular	Cauchy – Fuler differential equations – Simult
		integral – Inverse differential operators	differential equations (two variables with const
		Linear Differential Faustions:	coefficients) - Solution of ordinary second order
		Cauchy – Fuler differential equations – Simultaneous	differential equations by the following methods
		differential equations (two variables with constant	Reduction of order method and variation of par
		coefficients) - Solution of ordinary second order linear	Changing the independent variable iii Changing
		differential equations by the following methods i	dependent variable in Exact equations. Total
		Deduction of order method and variation of parameters ii	aquations Necessary and sufficient condition
		Changing the independent variable iii Changing the	equations – Recessary and sufficient condition equation $\mathbf{R} d\mathbf{x} \perp \mathbf{Q} d\mathbf{y} \perp \mathbf{R} d\mathbf{z} = 0$ to be exact (1)
		dependent variable, iv Exact equations. Total differential	equation $Fux + Quy + Ruz = 0$ to be exact (
		equations Necessary and sufficient condition for the	for the necessary part) – Simultaneous equation
		equations – Necessary and sufficient condition for the equation $Ddu \perp Ddu = 0$ to be event (proof only	form $\frac{dx}{R} = \frac{dy}{R} = \frac{dz}{R}$ .
		equation $Fux + Quy + Ruz = 0$ to be exact (proof only	Partial Differential Faustions
		for the necessary part) – Simultaneous equations of the $\frac{1}{2}$	Basic concepts Formation by elimination of
		form $\frac{dv}{dt} = \frac{dv}{dt} = \frac{ds}{dt}$ .	constants Formation by elimination of arbitr
		F y N Dartial Differential Equations:	functions Solutions of partial differential agu
		Pagia concents Formation by alimination of arbitrary	Solutions by direct integration I agronges's li
		basic concepts – Formation by elimination of arbitrary	Solutions by direct integration – Lagranges s in equations $\mathbf{P}_{\mathbf{r}} = \mathbf{P}_{\mathbf{r}}$ Standard trace of fin
		constants – Formation by emminations of arbitrary	equations $-\mathbf{r}\mathbf{p} + \mathbf{v}\mathbf{q} - \mathbf{k}$ Standard types of fif
		runcuons – Solutions of partial differential eduations –	
		Solutions by dimenting another. I	non-linear partial differential equations – Charj
		Solutions by direct integration – Lagranges's linear equations $B_{\rm m} = 0$ , $B_{\rm m} = 0$ , $E_{\rm m}$ and the set of first ender	method - Homogeneous linear equations with c
		Solutions by direct integration – Lagranges's linear equations – $Pp + Qq = R$ Standard types of first order	method - Homogeneous linear equations – Char coefficients – Rules for finding the compliment

	method - Homogeneous linear equations with constant	of separation of variables (product method).
	coefficients – Rules for finding the complimentary	
	function – Rules for finding the particular integral method	
	of separation of variables (product method).	
8	Line and Multiple Integrals:	No Change
	Definition of a line integral and basic properties –	
	Examples on evaluation of line integrals – Definitions of	
	double integral – Conversion to iterated integrals -	
	Evaluation of double integrals i. Under given limits ii. In	
	regions bounded by given curves – change of variables –	
	surface areas. Definition of a triple integral – Evaluation –	
	Change of variables - Volume as a triple integral.	
	Vector Calculus:	
	Vectors – Scalars – Vector field – Scalar field – Vector	
	differentiation – The vector differential operator - del –	
	Gradient – Divergence – Curl – standard derivations –	
	Vector integrations – The divergence theorem of Gauss –	
	Stoke's theorem, Green's theorem in the plane.	
	Numerical Analysis:	
	Numerical solutions of Algebraic and transcendental	
	equation – Bisection method – The method of false	
	position - Iteration method – Newton – Raphson method –	
	Secant method. Numerical solutions of a first order linear	
	differential equations – Euler – Cauchy method – Euler's	
	modified method – Runge –Kutta fourth order method –	
	Picard's method. Finite differences –Forward and	
	backward differences – Shift operator – Derivatives	
	operator - Weirstrass theorem (statement) – Interpolations	
	– Newton – Gregory – forward and backward difference	
	formulae – Lagrange's interpolations formula – Finding	
	first and second derivatives using interpolation formulae –	
	Difference equations. Numerical integrations – General	
	quadrature formula – Trapezoidal Rule – Simpson's 1/3	
	rule – Simpson's 3/8 th rule – Weddle's rule.	
9	Matrices:	No Change
	Matrices of order m x n - Algebra of Matrices –	
	Symmetric and skew symmetric - Hermitian and skew	
	Hermitian matrices, symmetric matrices and their	
	standard properties – Determinants – Adjoint of a square	
	matrix – Singular and non-singular matrices – Rank of a	
1	matrix – Elementary row/column operations – Invariance	
	of rank under elementary operations – Inverse of a non-	
	singular matrix by elementary operations. System of m	
	linear equations in n unknowns – matrices associated with	
	linear equations – trivial and non-trivial solutions –	
	Criterion for existence of non-trivial solution of
